## ABSTRACT

Malaysia aspired to transform its economy from an industrializing economy into a knowledge-based economy that is expected to help in achieving its Vision 2020. However, the new competitive landscape brought about by the shift into knowledge economy has presented companies with unprecedented strategic challenges for leveraging and making knowledge more productive as a competitive resource in a complex and unpredictable environment. Competitive success of businesses is depending more on strategic management of intellectual capital (IC) and less on the strategic allocation of physical and financial resources. The Resource-based Theory views that company resources such as IC are the key drivers of competitive advantages and vital to company financial performance. Meanwhile, the Knowledge-based Theory further supports the view that unique sets of knowledge, and the distinctive ways in which knowledge is integrated and organised by the company, can generate capabilities that either create or support a company's competitive advantage. With this development, companies have begun to recognise the importance of IC. This study investigated IC within an organisational context by examining IC and how it impacted company's performance. The initial focus was on determining the main effect between IC and performance; followed by exploring the individual effects of the IC components on performance. The findings led to the development of an IC index for Malaysian companies. Thus, the study came up with a model named Malaysian Intellectual Capital Index (My-ICI). The Index is used to measure the IC management practices in Malaysian companies. Lastly, the study also examined the moderating effects of business strategy on the relationship between IC and performance. Data was obtained from a questionnaire survey from 178 Malaysian Public Listed companies from eight sectors. Results indicated that IC is a significant predictor to a company's selected performance measures (Return on Assets, Return on Equity and Earnings per Share) except for Price Earnings ratio. For the individual effects, results indicated that the highest interaction effects was on EPS which saw the interactions with all the four IC components. As for the ROA, only two components (innovation capital and customer capital) interact together to give some significant effects. Meanwhile, the results from the My-ICI indicated that majority (78%) of the Malaysian companies belongs into Integration stage, which means that they were practising IC management quite consistently across the companies with further improvement being made from time to time. In terms of IC and performance, the results indicated that all selected performance measures have significant effects on company's performance, with the exception of PE ratio. Lastly, the results indicated that business strategy, acted as moderating variable, played a significant role in predicting the performance of companies as far as IC is concern. The results from the multiple regression models proved that IC and business strategy are significant predictors for all selected performance measures, except for PE ratio. In summary, the results have shown that IC is an important organisational capability which should be considered as a strategic resource. IC provides an important link in explaining that successful companies are those that can manage and respond well to the new dynamics of company competition by being able to strike an optimal balance between their employment of tangible and intangible resources vis a vis IC.

## ACKNOWLEDGEMENT

Syukur Alhamdulillah. It is only by the grace of Allah SWT and the prayers of my loved ones that this journey in the pursuit of knowledge is nearing its end, although not without the tribulations that tested my patience and perseverance as never before. As I reflect upon this thesis, I am truly humbled by the support and concerns of many people who have rallied around me and understood my aspirations. For I could not have carried on towards the end alone.

Mere words of thanks cannot express my gratitude to my main supervisor Associate Professor Dr. Huang Ching Choo who has constantly supported me from the beginning of my PhD endeavour. She has constantly urged and motivated me during the downside of my studies. She has demonstrated the role of a diligent, intellectual and wise scholar. My sincere appreciation goes to the co-supervisor, Professor Dr Zubaidah Zainal Abidin for helping me put my thoughts and ideas into proper perspectives and makes learning so enjoyable.

My appreciation also goes to Universiti Tenaga Nasional for sponsoring my studies. A special thanks goes to the Deputy Vice Chancellor (Sultan Haji Ahmad Shah Campus), Professor Dr. Salina Daud, the Dean, Faculty of Accountancy, Dr. Bakhtiar Alrazi and the scholarship committee members of Human Resource Department for granting me the scholarship.

With love and deep appreciation, I acknowledge my mother, Hajah Lijah for her endless prayers for my success; my wife, Walaitani and my seven wonderful children, Nurwahida Amalin, Nurakmal Solehah, Fatimah Anisah, Siti Nuraishah, Siti Nurasih, Muhammad Mu'inuddin and Nurafifah Mustaqimah for their sacrifices, understanding and continuous support.

I would also like to express my sincere gratitude to the management and staff of the Malaysian Productivity Corporation (MPC) especially to the former Director General, the late Dato' Nik Zainiah and the Director (Quality Excellence Awards), Tuan Haji Abdul Razak Omar for their assistance in data collection processes.

Special thanks goes to the UiTM Post Graduates Coordinators as well as the members of the Faculty of Accountancy for their kind assistance and administrative supports. Thank you also to all my friends, students, PhD peers for their continuous encouragement, happiness and friendship. For everyone of you, I can only pray that Allah SWT will bestow upon you with a blessed life.

<b>LIST OF ABBREVIATIONS</b>	xiv
<b>CHAPTER ONE: INTRODUCTION</b>	1
1.1 Background to the Study	1
1.2 Intellectual Capital in Malaysia	6
1.2.1 Creativity and Innovation	8
1.3 Problem Statement	10
1.4 Research Objectives and Research Questions	12
1.5 Research Process	13
1.6 Significance of the Study	16
1.7 Scope and Limitations of the Study	17
1.8 Organisation of the Thesis	17
<b>CHAPTER TWO: LITERATURE REVIEW</b>	19
2.1 Introduction	19
2.2 Evolution of IC Studies	19
2.3 Intellectual Capital Research	22
2.4 Intellectual Capital and its Classification	26
2.4.1 Definitions and Components of IC	26
2.4.2 Conceptual Models of IC	29
2.4.2.1 Human Capital Component	34

2.4.2.2	Structural Capital Component	35
2.4.2.3	Customer Capital Component	37
2.4.2.4	Innovation Capital Component	38
2.5	Measurements of IC	39
2.6	The Relationship between IC and Performance	41
2.7	IC Valuation – Methods and their Classification	43
2.7.1	Financial Valuation of IC	50
2.7.2	Non-financial valuation of IC	53
2.8	Underlying Theories of Studies in IC	59
2.8.1	The Resource-based View (RBV)	59
2.8.2	The Knowledge-based View (KBV)	65
2.9	Impact of IC on Performance	65
2.10	IC, Performance and Business Strategy	68
2.11	Summary	75

### **CHAPTER THREE: CONCEPTUAL FRAMEWORK AND HYPOTHESES**

	<b>DEVELOPMENT</b>	76
3.1	Introduction	76
3.2	Conceptual Framework and Empirical Schema	77
3.3	The Hypotheses Development	81
3.3.1	The Main Effects	81
3.3.2	The Individual Effects	87
3.3.2.1	Human Capital and Performance	88
3.3.2.2	Structural Capital and Performance	92
3.3.2.3	Innovation Capital and Performance	94
3.3.2.4	Customer Capital and Performance	97
3.3.3	Business Strategy as the Moderating Variable	98
3.4	Summary	102

### **CHAPTER FOUR: RESEARCH METHODOLOGY**

4.1	Introduction	103
4.2	Research Design	103
4.2.1	Phase I – Construct the Novel My-ICI Research Instrument	106
