Student's name : NOR AZMA BINTI ISMAIL  
Date : 12 - 10 - 2010

## **ACKNOWLEDGEMENT**

With high gratitude to The Almighty Allah S.W.T. who gave the ideas and physical strength in preparing this final project. Completion of a final project of this nature requires more than just the efforts of the author. I take this opportunity to express my gratitude to the persons and all parties who responded in many ways and also offered their invaluable contributions in carrying out this final project.

First of all, I would like to express my sincere gratitude and appreciation to my supervisor, Prof. Madya Raihan Saad who has given me guidance and support and contribution of ideas in preparing this final project. Also, a special thanks for their insightful supervision, encouragement, throughout the research and their creative suggestions.

My gratitude also goes to all those agreed to be interviewed formally and informally and gave me the benefit of their knowledge, views and experience I also indebted to all my friends for their moral support and encouragement during the preparation of this final project.

Finally I thank to my beloved parents and families, who never stops giving me their encouragement and full support in order for me to complete my dissertation. Thank you for all understanding given to me when I really need it. Hopefully, may Allah S.W.T bless all of you.

## **ABSTRACT**

Management is important in a construction of housing project. With qualified and efficient management providing, all works in the site project can be carry as schedule. One of the important management aspects in the site is management of construction waste. Research has be done with considered the best important process in wasted management, such as buying, transportation, monitoring, delivering, remaining and wasting of construction material. All information and data that interconnected in this research are collected through the interview with developer and contractor that monitored all project at Kota Bharu and Tanah Merah district in Kelantan. The objective of this research is to investigate the best management method of waste material in the construction site and to identify the problem that occur due to waste material exist on surrounding area of the construction site. According to the survey, most method of disposal of building material is burying at construction site, sent to disposal center, bake at the construction site, take and remove to other places and this is also the foremost important factors that cause major problem at the construction site.
