## **ABSTRACT**

Wearable Doorbell Notification for Deaf People is a wearable device to alert the deaf people who supposed to be the wearer of the device whenever there are people pressed their doorbell by using the wireless technology, nRF24L01 wireless module and Arduino Nano to produce the device with additional components such as push button, LED, LCD and vibrating motor. Most deaf people were using light doorbell notification that was placed in certain room. This situation caused them to not be alert of the light doorbell notification if they stay in another room because of mobility issue. The project objective includes the development of the wearable doorbell notification and evaluation of its reliability based on its functionality and network performance. There is two types of experiments were conducted in this project, functionality test and network performance test. These experiments have been divided into a few parts. The results shows that the higher the RF power amplifier used by nRF24L01, the higher the distance that can be reached by a signal from the doorbell to the wearable. It also shows that the data transmission rate did not influenced the response time of the wearable. The recommendations for future research were to fix the problems in the wearable and create a wearable alert device with more alarms such as baby crying alarm, fire alarm and vulgar alarm.

## **TABLE OF CONTENTS**

<b>CONTENTS</b>	<b>PAGE</b>
<b>SUPERVISOR APPROVAL</b>	ii
<b>STUDENT DECLARATION</b>	iii
<b>ACKNOWLEDGEMENT</b>	iv
<b>ABSTRACT</b>	v
<b>TABLE OF CONTENTS</b>	vi
<b>LIST OF FIGURES</b>	x
<b>LIST OF TABLES</b>	xii
<b>LIST OF ABBREVIATIONS</b>	xv
 <b>CHAPTER ONE: INTRODUCTION</b>	
1.1    Background	1
1.2    Problem Statement	3
1.3    Research Objectives	4
1.4    Research Scope	4
1.5    Significance of Research	5
1.6    Expected Outcome	6
 <b>CHAPTER TWO: LITERATURE REVIEW</b>	
2.1    Hearing Loss	7
2.1.1    Definition	7
2.1.2    Causes of Hearing Loss	8

3.3	Conclusion	30
-----	------------	----

## **CHAPTER FOUR: PROJECT DEVELOPMENT**

4.1	Introduction	31
4.2	Development the Prove of Concept	31
4.2.1	Hardware Development	31
4.2.2	Programming	40
4.3	Prototype	47

## **CHAPTER FIVE: EXPERIMENT AND ANALYSIS**

5.1	Introduction	48
5.2	Functionality Testing	48
5.2.1	Functionality testing on the wearable before and after the doorbell is pressed	49
5.2.2	Functionality testing based on the serial monitor outputs on doorbell and wearable	51
5.3	Network Performance Testing	56
5.3.1	Network performance testing in open area using different level of RF power amplifier on nRF24L01s	57
5.3.2	Network performance testing inside a house using different RF power amplifier on nRF24L01s	61
5.3.3	Network performance testing inside a house using different data transmission rate on nRF24L01s	65
5.4	Analysis of Functionality Testing	68
5.4.1	Analysis of functionality testing on the wearable before and after the doorbell is pressed	68
5.4.2	Analysis of functionality testing based on the serial monitor outputs of doorbell and wearable	70
