CUSTOMER KNOWLEDGE MANAGEMENT IN THE INSURANCE INDUSTRY IN MALAYSIA. THE ROLE OF KNOWLEDGE SHARING, MARKET AND TECHNOLOGY TURBULENCE

AHMAD SUFFIAN MOHD ZAHARI

Thesis submitted in fulfillment of the requirements for the degree of Doctor of Philosophy

Faculty of Business Management

September 2014
CONFIRMATION BY PANEL OF EXAMINERS

I certify that a Panel of Examiners has met on 26th June 2014 to conduct the final examination of Ahmad Suffian Bin Mohd Zahari on his Doctor of Philosophy thesis entitled “Customer Knowledge Management in The Insurance Industry in Malaysia. The Role of Knowledge Sharing, Market and Technology Turbulence” in accordance with Universiti Teknologi MARA Act 1976 (Akta 173). The Panel of Examiners was as follows:

Fauziah Noordin, PhD
Professor
Faculty of Business Management
Universiti Teknologi MARA
(Chairman)

Raja Abdullah Yaacob, PhD
Professor
Faculty of Information Management
Universiti Teknologi MARA
(Internal Examiner)

Rohaizat Baharun, PhD
Professor
Department of Business Administration
Faculty of Management
Universiti Teknologi Malaysia
(External Examiner)

Togar M. Simatupang
Professor
School of Business Management
Bandung Institute of Technology
(External Examiner)

SITI HALIJAH SHARIFF, PhD
Associate Professor
Dean
Institute of Graduates Studies
Universiti Teknologi MARA
Date: 4th September 2014
Customer Knowledge Management (CKM) is derived from the knowledge management concept, which can be applied by organizations strategies to satisfy their customers' needs and wants. The dimensions of customer knowledge management are developed from the knowledge flow perspectives such as knowledge for customers, knowledge about customers and knowledge from customers. In this manner, CKM refers to the management of knowledge for customers, knowledge about customers and knowledge from customers to improve organizational performance. This study examined the effects of CKM dimensions in influencing organizational performance in insurance industry in Malaysia. This study also investigated the influence of moderating effects of market and technology turbulence in the relationship between knowledge sharing and organizational performance and between CKM and organizational performance. This study also examined the mediating effects of knowledge sharing in the relationship between CKM and organizational performance. A total of 180 managers from various insurance companies in Malaysia are involved in this study by voluntarily completing the survey questionnaires. A series of statistical analyses were applied including descriptive analysis, factor analysis, reliability analysis, correlation analysis and multiple regressions analysis using the SPSS software. The finding of this study contributed to advance understanding of CKM and organizational performance in a number of important ways. First, the results of the study indicate support for the relationship between CKM dimensions and organizational performance. Knowledge for customers, knowledge about customers and knowledge from customers were found to have significant influences on organizational performance. Second, the results reveal that CKM dimensions have significant influence on knowledge sharing. With regard to the relationship between knowledge sharing and organizational performance, the results show that knowledge sharing was found to be significantly associated with organizational performance. Furthermore, the results also indicate that knowledge sharing as a mediator significantly mediated the relationship between CKM and organizational performance. Looking at the moderating effect of technology turbulence, the results show that technology turbulence significantly moderated the relationship between knowledge sharing and organizational performance. In contrast, market turbulence did not moderate the relationship between knowledge sharing and organizational performance. Finally, regarding the moderating effect of market turbulence on the relationship between CKM dimensions and organizational performance, the study revealed that market turbulence did not moderate the relationship between CKM and organizational performance. Furthermore, technology turbulence also did not moderate the relationship between CKM dimensions and organizational performance. The findings of this study contribute to knowledge management and marketing literature by adding new empirical evidence on the relationship between CKM, organizational performance, knowledge sharing, market and technology turbulence. In terms of managerial implications, the findings help insurance companies in organizing CKM dimensions, particularly in strategizing, marketing, decision making and positioning themselves in the insurance industry.

CHAPTER ONE
INTRODUCTION

1.1 BACKGROUND OF THE STUDY

In the development of globalization and coordination of banks, insurance and security enterprise, the insurance industry has been facing tremendous competitive pressure. Since Malaysia has entered into knowledge-based economy, many insurance companies have responded by leveraging heavily on their information and communications technology (ICT). According to Haemala and Bala (2008), and Guan (2013), the insurance sector plays a crucial role in enhancing the economic growth of a country.

Insurance industry in Malaysia is becoming increasingly important especially in the era of market globalization. Indeed, insurance is a product that is increasingly required in a person's life mainly due to the economic uncertainty and the change of lifestyle. Nowadays, the insurance industry has grown rapidly because of the competition in the market. Therefore, every company needs to be more innovative and aggressive to ensure competitive advantage in the market that can improve its performance. In relation to this, the insurance industry can be seen as a thriving sector, with the growing demand and the increase in the consumer awareness on businesses and individual risks. Referring to the statistics by Life Insurance Association of Malaysia (LIAM), the Malaysian population covered by various life insurance policies show an increase of eight per cent from figures in 2011 at RM946 billion. As at December 2012, the figure increased to chart the amount of RM1.02 trillion sum insured in the form of various life policies.

The insurance industry has grown in line with country economic development to meet the more knowledgable people at this time (Guan, 2013). Therefore, the insurance companies have learned to develop their knowledge assets in their effort to improve the insurance industry in Malaysia. The emerging fluctuation of the Malaysian insurance and investment market has also directly incorporated the idea of using knowledge and information as sources of differentiation strategy. According to Huang and Lai (2010), in
