ACKNOWLEDGEMENT

I would like to express my sincere gratitude and appreciation to my supervisor, Professor Madya Dr Rahim Bin Atan, for his continuous support, generous guidance, help, patience and encouragement during the preparation and until its completion of the thesis. He led me through the obstacles during the different stages of my research and helped me achieved success.

A special gratitude is also extended to my colleagues, the engine dynamometer test bench specialists, Mr Sujairi bin Ahmad Nashoha, Mr Ezzudin bin Harun, Mr Mohd Zaki bin Mokhtar and Mohd Yusri bin Lani for their assistance, directly or indirectly, during the entire period of pursuing my Masters program in UiTM. Not forgetting my thank you also goes to all mechanical engineering lecturers who had spent valuable time to coach and teach me with the technology required in my study. Their assistance and co-operation are very much appreciated.

Finally, I am greatly thankful to my wife Anie, my daughters, Alisha, Amalin, Aqish and son Affan, my father & mother for your support, love and understanding for Abah to complete this Masters program.

ABSTRACT

An approach for control of the spark ignition on the advance / retard and also the spark voltage with air fuel ratio for a model of carburetor engine is proposed. The amount of air to fuel ratio is one of the well-known problems in an engine management system design. It is one of the most critical parameter to the analysis of engine performance, torque and fuel consumption. It is common in the production plant as well as in the market use a greater diameter of high-tension cable that is expected to provide a proportional power with the increase amount of spark intensity to achieve the desired engine performance with stoichiometric air fuel ratio. A manually voltage control coils before the high tension cable is used to vary the spark strength in the combustion chamber in order to measure the power, torque and fuel consumption. Sets of experiments were conducted and results obtained were presented in term of graphs.
