ABSTRACT

Halal food contribution to the spiritual intelligence of human beings plays a crucial role in all domains. It also promote mental alertness, understanding and learning processes, physical well-being, emotional and spiritual health. This paper is a descriptive study focusing on the components and mechanism of halal food in order to gain knowledge of its spiritual values and wisdom for the phylogeny of human civilization, which has not previously revealed. *“Therefore eat of what Allah has given you, lawful and good (things), and give thanks for Allah's favor if Him do you serve”*. (Qur'an, 16: 114). Halal is an Arabic word termed as “lawful” and “pure” and it is the mechanism for the spiritual growth and development of human being. The findings indicate a substantial relationship between halal food and the ways human manage and govern the world.

Keywords: Halal food intrinsic value; spiritual intelligence growth and development; sustainability.

1. Introduction

In order to sustain the world and to preserve humanity to its highest intrinsic value, the subject of halal food in its spiritual significance should be considered as the most important knowledge in this 21st century. While exploring the essence of halal issues, the world is missing the ingredient of its spiritual values. Research has proposed that spiritual beliefs, practices, and commitments appear to be linked with positive results like psychological and physical well-being; marital satisfaction and stability; positive interpersonal performance; and better quality of life (Seybold & Hill, 2001).

Food refers to any substance consumed to provide nutritional support for the body. The substance is ingested by an organism and assimilated by the organism's cells to provide energy, maintain life, or stimulate growth. This definition provides us a roadmap that halal food is not just about religious identity, but it has the power to stimulate growth on the body-mind-soul complex. This affects how human thinks, acts and behaves which deeply impact human life. Therefore, halal food study aims to provide knowledge, from the human spiritual development perspectives, where human are able to create intelligent and stress free society.

Halal is not just a question of how food is prepared and standardized but what influence it does on the cellular levels of the human body. This would give rise to the re-interpretation and standardization of the aspects of food prepared under the mechanism of halal.

The halal food you may see as clean and pure on the physical scale can be haram on the quantum level if you truly ponder. It is frightening to note that slaughtered halal animals sold over the counter in wet markets itself does not fully comply within the mechanism of the divine laws which need to be urgently scrutinized. When all the important faculties in the human body are hijacked by 'dead' food: pineal gland, amygdalae, brain cell damage etc., we are actually giving birth to human beings who do not possess any emotion when harming another human being, who interprets the world with different perception which leads to divide and rule attitude, hatred, sealing of the hearing and the seeing, hardened heart and many other abundant negativities.

This is the hidden meaning behind the du'a prescribed before an act of eating which means, *"O Allah! Bless (the food) You provided us and save us from the punishment of the Hellfire."* Food we consumed can harm us in ways unimaginable and has the capability to lead us to do sinful acts.

The sufferings of mankind are due to the food we consumed which greatly impact our thought process and how we see and govern our world. Dead food does affect the sacredness of the human body therefore distorted it from achieving its emotional and spiritual intelligence and whole food, living food or halal food no doubt has the power to create harmony, peace and balance within the body-mind-soul complex which is an important mechanism to sustain human civilization of the highest intrinsic value.

This study attempts to explore the connection between human body with the halal food to further expand beyond the definition of halal mechanism, which includes the subtlety of its divine principles. Specifically, this study dig into the concept of divine intelligence and its influence upon the human body and its capability to produce spiritual intelligence consciousness. It is noted that human perception, wisdom, intuition, integrity, self-esteem, intelligence and creativity have association with how the human body operates.

This paper will prove that halal food and the human body are interconnected, entangled and brilliantly organized as a whole, which operates according to a set of laws. Insights into this provide wisdom into what works and what doesn't work, because when something is in line with the law and order, it creates no resistance, rather it is in harmony and balance.

2. Methodology

This study analyses verses from the Quran, scientific metaphysics parallel to quantum physics, cognitive science, neuroscience and biophysics as a reference to gather insight into the true meaning of halal food and its influence upon the human body. According to Bunge (1971) scientific metaphysics is more ambitious: it attempts to solve problems left over by plain metaphysics, it tackles new problems, and it tries to be in tune with both formal and factual science. Quantum physics not only help us understand the quantum state of the human body when halal food is consumed but also the behavior of the soul during an act of slaughtering whilst cognitive science and neuroscience examines the animal's psychological state during this process. Biophysics explores the excitation of electrons when God's name is mentioned.

The review of this literature provides the following schema:

- (1) The relationship between slaughtering, living and dead food and halal food;
- (2) The true meaning of halal food and its influence upon the human body;
- (4) Probing into powerful forces: how God's power and intelligence are organized within the scale of human body via halal food process in changing one's awareness, consciousness and perception;

- (5) How the electrons in the human body behave when the food is non-halal as it impact the structure of our DNA, the blueprint of man.

To make these contributions, the paper is structured as follows. Section 2 describes the methodology approach in the study to structure the research reviews. Section 3 analyzes and presents the findings for explaining the implication of halal food on human intelligence. Section 4 critically discusses the research findings and implications. Section 5 concludes the research and provides suggestion for future research.

3. Results and Analysis

3.1 The Biology of Living Beings

Research has proposed that food we consumed has certain degrees of spiritual purity which leads to positive and spiritual energies. Basically, what we eat is what our body gets, thus halal food directly impacted our body which in turn affects our mind. The pure body affects the mind which greatly impacts a true believer and the institution of his/her soul and this is crucial in order to worship God in a rightful manner. A sound mind can only emerge from a sound heart and a sound heart can only resonate from a pure and sacred body. Hence, nutrient plays an important role in order for cells to function accordingly.

“And We made from water all living things” (Surah Al-Furqan verse 54). The verse supports the scientific fact that two-thirds of a cell are water. In the cell is the DNA which is the blueprint for all living things and an exposure to negative imprints from food will cause DNA damage which in turn depletes the body from all of its intelligent functions.

An atom is composed of a nucleus and is surrounded by electrons that move round the atom in an orbit. In scientific discovery, it is noted that every atom has a nucleus stabilizing it. It is known scientifically that nucleus is in the form of light. Nearly every living organism emits light at a steady rate from a few photons per cell per day to several photons per organism per second” (Musumeci, Godlevski, Popp & Ho; 1992). These reviews reveal that living beings are atoms, electrons and photons and that the faculties in the body are whirled in them.

3.2 An Act of Slaughtering

According to Islamic law, “*Dhabīḥah* or slaughter is a prescribed method of ritual slaughtering of all lawful halal animals and the name of God or Bismillah must be called by the butcher upon slaughtering of each halal animal. It should be performed with a swift, deep incision using a very sharp knife on the throat, cutting the wind pipe, jugular veins and carotid arteries of both sides but leaving the spinal cord intact (Usmani, 2006).

A team from University of Hannover in Germany used EEG and ECG recordings during slaughtering. They implanted several electrodes on various points of the slaughtered animals in an experiment and left them to recover several weeks. These animals were then slaughtered according to the halal act of slaughtering. A controlled sample were stunned before slaughtering using a captive bolt pistol method as the customary method applied in western slaughter houses. The EEG and ECG recordings allowed the monitoring of the condition of the brain and heart throughout.

They discovered that through the halal act of slaughtering there was no change in the EEG graph for the first three seconds after the incision was made, indicating that the animal do not feel any pain from the cut. The EEG recorded a zero reading, indicating no pain at all, yet at that time the heart was still beating and the body convulsing vigorously as a reflex reaction of the spinal cord, its brain no longer records any sensual messages. Whilst using the Western method, EEG readings indicated severe pain immediately after stunning (Schulze et al., 1978).

3.3 The Excitation of Water through Divine Interference

There are two verses of the Quran that command to pronounce God’s name upon an act of eating and slaughtering. Allah said; “*Do not eat from that which the name of Allah has not been mentioned, for it is a sin*”. (Qur’an, 6: 121). In the same surah Allah said; “*You shall eat from that upon which God's name has been pronounced, if you truly believe in His revelation*”. (Qur’an, 6: 118).

Dr Masaru Emoto, a Japanese water researcher, has shown that beautiful crystals are formed after water is exposed to the words of love and gratitude (Figure 1). Since all living organisms are made from 85% of water, words do have a great impact on the quantum state of the body. In his research, by mentioning the name of God, beautiful molecular structure is created (Figure 1). The creation is parallel with the saying of

Allah in Surah Al Furqan: 2, “*It is He Who created all things in due proportions*”.

When the name of God is mentioned, an enormous network of geometric shapes with perfect symmetrical patterns takes its course exactly computed within its 5,000 million molecules in a drop of water as in Figure 2 and 3 as an analogy.

(Source: <http://www.microbehunter.com/vitamin-c-ascorbic-acid-crystals/>)

Figure 3. ZamZam Water
(Source: <http://www.masaru-emoto.net/english/water-crystal.html>)

The perfect geometric shapes formed in the water molecules are a life giving sustenance for our consumption and the source that sustains all living beings, all these are happening in the subtlest level. Thus, the body of the slaughtered animal will also be influenced when Bismillah (in the name of Allah) is mentioned.

Korotkov (2007) invented an equipment to capture tiny pulses of photons emitted by living things through evoking, stirring and stimulating them into an excitation state so that they glow millions of times more intense than normal. He found that water glow has the capability to retain information. He said that the photon emission activity of water depends upon the presence of clusters of hydrogen atoms with a special ability to bond. A hydrogen atom is an atom of the chemical element hydrogen. The electrically neutral atom contains a single positively charged proton and a single negatively charged electron (CHFCA, 2017).

It is the excitation of electrons through stimulation that initiates light emission, that is why cells glow millions of times than normal. Hence, mentioning Bismillah is the way purest energy or divine energy pours its hidden riches in matter. These bio-photons or divine energy can rearrange the chaotic, disorganized, disrupted human body into its intelligent potential state: a state of health spiritually and physically and other abundant positivity. The cells in the human body will absorb this high order light frequency to oscillate into a much higher frequency for higher brain function.

3.4 The Soul's Golden Spiral Momentum

The law of pair is a fundamental law like gravity, and the life of plants, in its law of pair, can be used to understand how the quantum state of the body of a sacrificed animal work and why Allah's name must be mentioned. The fact is indeed mentioned by Allah in the Qur'an, "*Glory to God who created everything in pairs whether from which the earth grows and within themselves nor of what they know not*". (Qur'an, 36: 37). All animals and plants cells possess the same characteristic attributes i.e their cells are glued together as in Figure 3. This provides us an understanding of the soul's golden spiral momentum of the slaughtered animal.

Nature of plants and the math miracle formula of the Fibonacci's sequence: Fibonacci's series 0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144 etc., the value of 1.618... ad infinitum – the Golden Ratio, Golden Mean, Golden Spiral or Phi. Fibonacci numbers and Phi are in relation to the spiral development of balance, order and harmony. It is an intelligent mind force of mathematical formula that weaves the fabrics of plants in its perfect symmetry. The geometric shape water molecules when God's name is mentioned allow divine energy forces to nests within its grids. This is the process of light put together or in biology of plants is termed

as photo-synthesis. Golden Ratio is generated from the energy centre connecting the vertices of the nested geometric shapes produces a logarithmic spiral as well. This is not a theory. This is the quantum mechanics of nature.

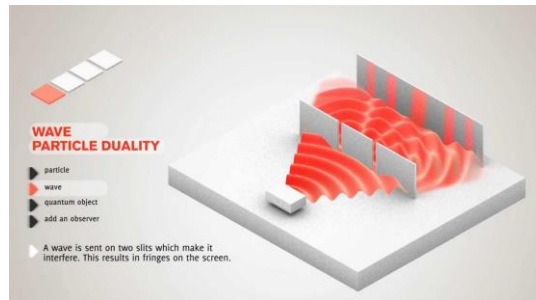

These definite spiral patterns teach human that the same intelligent mind force weaves the energy fabrics of the slaughtered animal in order to sustain and accelerate the soul in a definite spiral momentum. The soul upon leaving the body of the slaughtered animal must obey the Golden Spiral rule, if not, the slaughtered animal will suffer immense pain and the meat is dead and not whole. When the soul obeys the divine law, it will glide efficiently, relatively easy and effortlessly and it will be in harmony and balance with the greater whole.

3.5 The Conscious Observer Effect

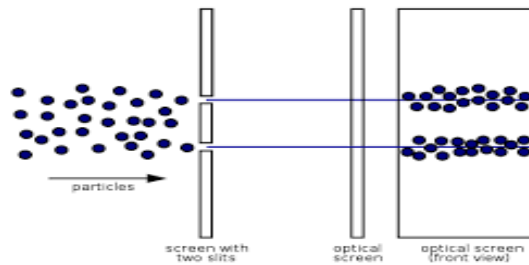

The soul is light in nature and light has a wave-particle duality. Quantum physics endorsed that photons, electrons, and atoms move through space in waves until someone looks at them, the waves collapse and change to particles. Only when the electron or photon is observed does this phenomenon take place.

In the case of the slaughtered animal, there is a conscious observer that collapses the wave and changes it into a particle state. It is The Almighty Allah as the conscious observer in this case that photon collapses its wave probability. In layman quantum physics, the electron will act cool when being observed and chaotic when it not observed. This means, wave property will result in the death beat of the soul in the body.

The double-slit experiment explained deeply why the quantum state of the soul must be in a particle state and not wave property (Figure 4). In the double-slit experiment, a single photon (or electron), acting wave like penetrates through both slits all at once and interfere with each other before hitting the back wall in a very chaotic state whilst the other acting wave like particles effortlessly penetrates both slits without interference.

Materials in wave particle duality

Materials in wave particles

Figure 4. The quantum state of the soul of the slaughtered animal
(Source: www.en.wikipedia.org)

Consider the soul of the slaughtered animal to pass through a slit acting wave like when there is no conscious observer (disharmony) and acting like a particle (harmony) with a conscious observer interference. The effect can be understood by pondering the saliva of a person who is not coherent and one who is coherent (Figure 5). The Institute of HeartMath has demonstrated the impact of emotional function in different heart pattern activity produced by different emotional states.

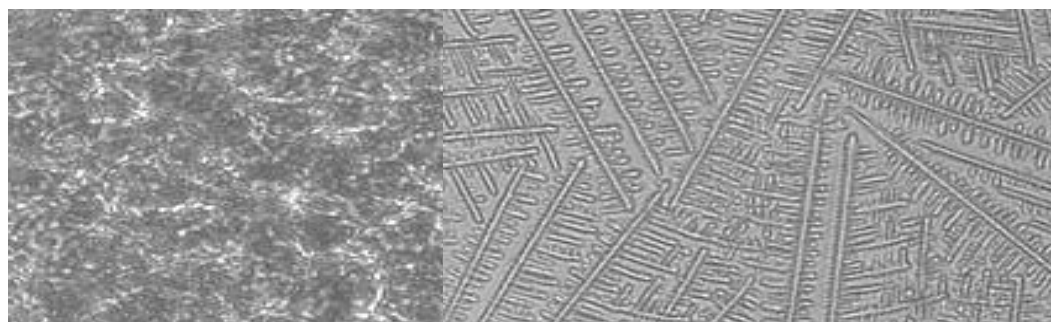

Image 1: Saliva of person not coherent
Image 2: Saliva of same person after five minutes of heart coherence practice

Figure 5. Saliva of person (Source: www.glcoherence.org)

According to scientific metaphysics, thoughts and emotion is not the product of the mind rather a substance in which all frequency beings (messenger particles) are dipped into. Frequency beings play a crucial role in instilling the stable pattern of the heart of the slaughtered animal which initiates emotional stability. Frequencies from divine tones generated by the geometric shape water molecules have the ability to increase heart rhythm by sustaining positive emotions, not only to the entire body, but also to the brain.

Consider the geometric shape in the water molecules acting like a Higgs field gives the electron its mass. Newton's law dictates that a force applied to a mass generates acceleration. Harmonic acceleration is an important mechanism for the soul's exit during an act of slaughtering and also for perfect chemical reaction to transpire in the body which gives meat its nutritional impact. Electron with mass generates high frequencies which become an important mechanism to raise not only brain waves, but also for frequencies to vibrate in unison in the body. Frequencies resonate together when they share a common harmonic and are therefore said to be in harmony with each other, or they resonate Vibrations, Frequencies and Harmonics (McKelvie, 2006).

Therefore, by mentioning Bismillah proves to be the greatest upholding power of the body-mind-soul creating a healthy flow of energy and prevent beats that cancel each other out or a dead beat upon an act of slaughtering. The slaughtered animal is able to create within itself a spiritual connection into infinity.

In order to dictate the sacredness and the nutrients of the meat, we must consider the body's quantum state which lies in the properties of the water or the soul's quantum state and the body's chemical reaction that transpire upon an act of slaughtering. This is to see whether we are eating meat that is dead or meat that is whole and living. God-consciousness or the quantum coherent field become entangled with the water, influencing its structure and thereby influencing 85% of the molecules in the body. This is called quantum entanglement within the quantum mechanics theory.

3.6 The Scientific Metaphysic of Micro Nutrients

When Bismillah is recited, it has within itself its own unique properties of measured rhythmic tones, the energy transfers vibration to the animal via the ear before slaughtering. This causes harmonic resonance relationship between the name of God and the soul. The vibration frequency of the divine tones are interwoven into the math miracle skeletal structure, formulate geometric pattern in the 85% of water, cells glued together to form beautiful geometric shapes arrangements, regulate body rhythms, hormone secretion etc – the Domino Effect.

Therefore, in order to preserve the sacredness and the purity of meat, the act of slaughtering should be done and sold on the spot. This is due to the fact that the purity imprints of the meat can be easily modified and rewrites itself owing to the environment of negative energies.

Researchers from Queen Mary University of London, the Institute of Agricultural Science in Switzerland and the Royal Society's Biology Letters have shown that slaughtered goats demonstrate an affinity with humans and the ability to form bonds with humans. The test provides an understanding to the interaction between a butcher and the animal he is about to slaughter at the quantum level.

Research from Spiritual Science Research Foundation has proposed that meat can modify its vibration due to the environment using bio-feedback instrument and the result is obtained with Polycontrast Interference Photography (PIP) (Figure 6). The first image, before the meat was placed is the aura of an environment in which "orange represents vibrations of tension, green signifies positive energy and yellow with a golden tinge represents a high level of universal vibrations. In the aura of environment, there is yellow colour denoting a high spiritual principle in the centre, orange colour denoting stress is beside it and then the green colour denoting positivity and momentum is visible.

After meat was placed on the plate, the entire environment underwent change. The positivity indicating green color reduced and the negative orange color increased and it was attracted to the meat. The positive yellow color also reduces.

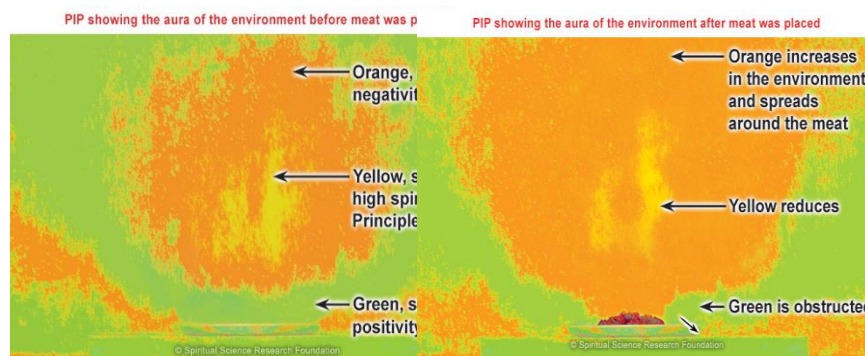

Figure 6. Polycontrast Interference Photography (PIP)
 (Source: <https://www.spiritualresearchfoundation.org/>)

3.7 Halal Food and the DNA

Living and dead meat or food can best be described by comparing the molecules of living and dead water. Emoto (2010) tested tap water from around the world and came to the conclusion that tap water does not form water crystals because it is dead water. Figure 7 displays the molecules of living and dead water.

It is known that water and the food we eat affect our body, brain and cells which in turn affect the system of our body's natural function which results in many complications such as hardened heart, pineal gland shut down, and other abundant negativities. These disrupt the intelligent potential of human beings. For example, it has been shown that fluoride in tap water build up in the body specifically targets the pineal gland (Luke, 1997). Schumann Resonance project proved that there are two ways human body receives frequencies; by existing within the planet's atmosphere and by consuming water in its purest and whole state.

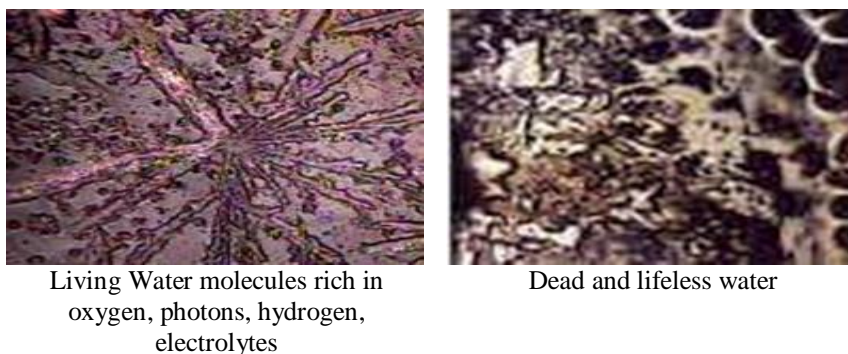

Figure 7. Water molecules (Source:www.vibrancywater.com/)

Spiritual and emotional intelligence can only descend when the body, mind and soul are in a state of quantum coherent and these quantum states cannot be achieved from non-halal food, or in other words, food that is not living or whole. Human brain chemistry is being hijacked to unlawful chemically induced food intake which results in amygdale hijack where the neo-cortex is shut down. The amygdale is the part of the brain that handles emotion.

DNA molecules contain genetic instructions used in the development and functioning of a living organism. In a human body, when DNA is exposed through negativities, it loses one electron. Electron migrates from the other portion to replace the lost ones, therefore losing attunement or harmony of the body and the DNA's Golden Spiral momentum is disturbed. When the DNA is exposed to halal food due to its intelligent chemical reaction, it possesses the capability to change its spiral momentum. It is known that DNA's spiral momentum follows the Golden Ratio rule and has the ability to quantum communicate and meet its pair. Everything has its pair to prove the greatness of Allah in governing and commanding the creation.

“By the (Winds) that scatter broadcast: And those that lift and bear away heavy weights; and those that flow with ease and gentleness; and those that distribute and apportion by Command”. (Qur'an, 51: 1-4). The verse teaches man about the ability of quantum communication by telling that electrons can be triggered to produce electricity and magnetic fields (Qur'an, 51: 1). This energy can be generated or encoded (Qur'an, 51: 2) filled with information emitted to God in a frequency unique unto itself (Qur'an, 51: 3). Power and intelligence is delivered to the cell by

messengers particles dividing command or programming the DNA (Qur'an, 51: 4), for the function of human life.

4. Conclusion

This study represents some of the novel efforts in understanding how halal food help shape our intelligent thinking process and its impact on Muslim civilization. First, the findings determine that halal food is able to help shape human civilization of the highest intrinsic value. Second, the study confirms the significant performance differences between those using spiritual approach and those using physical approach when performing an act of slaughtering. Third, the study ia able to identify the need for halal food compliance to produce intelligent society. Finally, the study connects the findings of modern science to the frontiers of spiritual sciences, as well as disseminating the miracle of the Quran. The knowledge of halal food spiritual significance should be the most important knowledge to be spread out and scrutinized for further research for the benefit of our nation and future generations.
