AUTHOR'S DECLARATION

I declare that the work in this dissertation was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Intan Shahirah Binti Sobri

Student I.D. No. : 2016490902

Programme : Bachelor of Surveying Science and Geomatics
(Honours)

Faculty : Faculty of Architecture, Planning and Surveying

Thesis : Assessment of Digital Terrain Model (DTM)
generated from UAV Aerial Image using
Photogrammetric Image Processing Module

Signature of Student :

Date : July 2019

ABSTRACT

The Digital Terrain Model (DTM) were presented about bare surface of the earth. It is produce DTM from data Unmanned Aerial Vehicle (UAV). However, the lack of processing will caused error and the result produce erroneous DTM result(Zietara, 2017). Therefore, this study to assess the accuracy of the Digital Terrain Model (DTM) on a map generated from UAV Aerial Images in Uitm Arau,Perlis. The objective of this study to apply the photogrammetry image processing process in production of Digital Terrain Model (DTM) using UAV Aerial Image and to analyze accuracy of Digital Terrain Model (DTM). These images were processed using Agisoft Photoscan. Eight (8) point were placed as Ground Control Point (GCP) and coordinate measured using static method using Trimble R6 GPS instruments. Besides,30 station of check points were establish at this area through the method GPS RTK net in order to determine accuracy of Orthophoto and DTM. The overall result of DTM are between 7m to 40 m.The result for mapping accuracy assessment based on RMSE, which is the error shoud below than 0.2meter for xy Coordinate and for vertical below than 0.4meter. The final result of this research show that the DTM are processing in 3 different method processing. There are unclassify, random classify and classify. The accuracy of DTM coordinate differential between map and survey check point were analyzed In conclusion, the Digital Terrain Model (DTM) are processing from UAV Aerial Image that can be use for surveyor to analyse the elevation of earth. This is because UAV can generate accurate of DTM.

TABLE OF CONTENT

	Page
CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
SUPERVISOR'S DECLARATION	iv
ABSTRACT	v
ACKNOWLEDGEMENT	vi
TABLE OF CONTENT	vii
LIST OF TABLES	x
LIST OF FIGURES	xi
LIST OF ABBREVIATIONS	xiii
CHAPTER ONE : INTRODUCTION	1
1.1 Introduction	1
1.2 Problem Statement	2
1.3 Aim and Objective	3
1.4 Scope and limitation of Study	3
1.5 Significant Study	4
1.6 Research Methodology	5
1.7 Structure of Chapter	6
CHAPTER TWO : LITERATURE REVIEW	7
2.1 Introduction	7
2.2 Definition of Digital Terrain Model (DTM)	7
2.3 Method used to generate Digital Terrain Model (DTM)	8
2.3.1 Generate Digital Terrain Model using Total Station	8
2.3.2 Generate Digital Terrain Model using Ground Position System (GPS)	9
2.3.3 Generate Digital Terrain Model using LiDAR	11
2.3.4 Generate Digital Terrain Model using Photogrammetry	11
2.4 Accuracy Assessment	13
2.5 Unmanned Aerial Vehicle (UAV) for Mapping	14

CHAPTER FOUR : RESULT AND ANALYSIS	52
4.1 Introduction	52
4.2 Accuracy Assessment for Ground Control Point (GCP)	52
4.3 Accuracy Assessment for Verification Point (VP)	54
4.3.1 Accuracy Assessment for Digital Terrain Model (DTM)	55
4.4 Differential between heighting and Verification Point (VP)	57
4.4.1 Differential value heighting between unclassify with survey check point	57
4.4.2 Differential Value heighting between random classify with survey check point	59
4.4.3 Differential value heighting between classify with survey check point	61
4.5 The contour for Digital Terrain Model (DTM)	63
4.5.1 The contour for unclassify DTM	64
4.5.2 The contour for random classify DTM	66
4.5.3 The contour for classify DTM	68
4.6 Visualization of Digital Terrain Model (DTM)	70
4.7 Map Publication	71
CHAPTER FIVE : CONCLUSION	72
5.1 Introduction	72
5.2 Conclusion	72
5.3 Recommendation	73
BIBLIOGRAPHY	74
APPENDICES	77
