ABSTRACT

The present study aims at applying different methods for forecasting the production of natural rubber in Malaysia. Two different methods, Box-Jenkins and Artificial Neural Network, were used to forecast the production of rubber. The monthly data from 1984 until 2017 were the data used to analyse and the data split into two parts which is 1984-2016 is for fit the model and 2017 for validate the model. SARIMA (0,1,2) (0,1,2)₁₂ is the best model for Box-Jenkins analysis while Multilayer Neural Network that contain 12 input nodes, 8 hidden nodes and 1 output nodes is the best model for Artificial Neural Network analysis. The performances of the models were compared and the result shows that Artificial Neural Network model was found to model the production better since it has the lowest MAPE value. Thus, Artificial Neural Network can be an effective tool for forecasting the production of natural rubber in Malaysia.

Keywords: Box-Jenkins, Artificial Neural Network, forecasting, natural rubber production

ACKNOWLEDGEMENT

In the Name of Allah, the All-Compassionate, All-Merciful

Alhamdulillah, our utmost gratitude to Allah SWT for His guidance and in giving us strength, courage and persistence throughout our life, especially during difficult times in our life and with His consent we can complete this research.

Our gratitude and many thanks go to our supervisor Madam Nor Fatimah Abd Razak for her continuous support, patience and ideas which enabled us to successfully complete our research journey at the Faculty of Computer and Mathematical Sciences, Universiti Teknologi Mara (UiTM). It would have been impossible to complete this research without her help and guidance. I would like to express my gratitude to Department of Statistics Malaysia and CEIC Data for the open resources of data and information to us to collect the data for our research.

We heartily thankful to my beloved family. No word can express how much we appreciate their love, continuous prayers, forgiveness, motivation and faith. Finally, special thanks to our colleagues, friends and housemates for helping us directly or indirectly in completing my research. Alhamdulillah.
