ACKNOWLEDGEMENT

“ASSALAMUALAIKUM W.B.T”

First and foremost, I would like to express my deepest gratitude to Almighty Allah S.W.T, who has enable me to overcome all the obstacles and gave me the courage, strength and ideas in completing this research paper.

Secondly, I would like to express my gratitude to my advisor Miss Siti Norbaya binti Mohd Rashid for the support and full commitment in guiding me throughout the completion of the research paper. Without her help, it would be extremely difficult and challenging to complete this research paper and it would not be as it is today.

Not forgotten, my second examiner, PM DR Asry bin Yusoff. Thank you so much for helping me out throughout the completion of research paper. Alhamdulillah, with this submission, I have fulfilled part of the fulfillment to the requirement for the Bachelor in Business Administration (Hons) Finance.

Special thanks to my beloved family, for always being there for me and supportive from the beginning of this study until the end. Their never ending support helps me to finish up this study efficiently and effectively.

Finally, I would like to thank to all my beloved friends, who directly or indirectly involved in helping me out in completing this research paper.

Thank you very much.

ABSTRACT

Past studies in the United States, Canada and Australia indicated the existence of seasonality effect, i.e. “January effect” due to taxes imposed on the capital gains in these countries. This paper attempted to find out whether or not this conclusion is also true in the case of Malaysia where there is no tax imposed on the capital gains. Initial observations showed that there is January effect in the year 2007. The mean daily return of January in year 2007 recorded the highest mean score compared to other months studied. Higher mean daily standard deviation in the month of January than other months somewhat reinforce the existence of January effects in the Malaysian market in the year 2007. However, the F-statistic indicated that the overall differences among these months were not statistically significant, which means there is no January effect or even seasonality effect in Malaysia.

Keywords: seasonal effect, January effect, tax-related selling hypothesis, efficient market hypothesis, Kuala Lumpur Stock Exchange
