ABSTRACT

Counseling is defined as the establishment of professional assistance and guidance in resolving personal or psychological problems. It involves two communication between counselor and client. The objective of this study is to to analyze the factors that caused students avoid from joining some counseling session. This research is also to rank the main factors of avoidance from joining counseling by using method of Fuzzy Analytic Hierarchy Process (FAHP). The result that obtained from this study indicates that negative stigmatation is the first factor of why students do not interest in joining counseling. It followed by treatment fears as the second factor and then the factors of anticipated risk and utility as the third factor of this issues. The significant of this project is to change the negative perception of the students in UiTM Perlis about the counseling. Lastly, this study will open the mind of many people about the importance and the benefits of counseling in order to help to create a better performance of life.
