## **ACKNOWLEDGEMENTS**

We would like to express our gratitude to the Almighty for giving us opportunity to seek wisdom and knowledge of the universe and can be a good caliph to manage and explore the technology era.

We feel very grateful because we are able to finish this project until this stage. Without cooperation from those that involve in this project, maybe it cannot reach this level.

We would like to express our appreciation to IRDC, Universiti Teknologi Mara (UiTM) for the approval on the title of our project as a registered work in IRDC although without any funding.

Not forgotten also to all of our friends who kindly help us to find and searching the information, thought us on how to use the software, and also gave some ideas on how to do the project. Without their support, we cannot finish this project on time.

We also would like to thank our family for their encouragement and support on this project. Lastly, there are stills many people that involve in this project directly or indirectly that we cannot mention their name here, thank you very much.

## **ABSTRACT**

Mobile robot is a robot that capable of moving in space with the aid of a specialized mechanism such as wheels, chains and articulated legs. It can be used for various tasks, such as inspecting and repairing, mining, unmanned aerial vehicle (UAV), navigation and disarming in hazardous environments. In order to improve the capability of mobile robot, current researchers focused on applying wireless communication to control the mobile robot. This project proposed to build a prototype Wireless Development System (WDS) for Mobile Robot. It will utilize radio frequency (RF) wireless communication between the mobile robot and computer through graphical user interface (GUI) on a computer. This project presents one of the usages of the PIC (Programmable Integrated Controller) as embedded controller that had the ability to interface with the RF technology. In addition, it will be equipped with a wireless camera as a feedback device to the remote system. For interaction, a gripper is fixed to the mobile robot to pick and place object. The prototype has be successfully implemented and tested for its functionality in real time environment. Outcome from this research project hopefully can be utilized in ROBOCON competition for UITM Robot team.

## TABLE OF CONTENTS

<b>TITLE PAGE</b>		ii
<b>LETTER OF RESEARCH OFFER</b>		iii
<b>LETTER OF REPORT SUBMISSION</b>		iv
<b>PROJECT TEAM MEMBERS</b>		v
<b>ACKNOWLEDGEMENTS</b>		vi
<b>CONTENTS</b>		viii
<b>LIST OF ILLUSTRATIONS</b>		x
<b>CHAPTER 1 INTRODUCTION</b>		1
1.1 Introduction		1
1.2 Objective of the project		2
1.3 Significance of the project		3
1.4 Report Layout		4
<b>CHAPTER 2 LITERATURE REVIEW</b>		6
2.1 Introduction		6
2.2 Mobile Robot Applications		6
2.3 Literature Review		7
<b>CHAPTER 3 METHODOLOGY</b>		9
3.1 Introduction		9
3.2 Wireless Development System (WDS) mobile robot operation		9
3.3 Engineering Process		11
3.3.1 Mobile Robot Platform and Microcontroller		11
3.3.1.1 Design		11
3.3.1.2 Equipment Requirement		14
3.3.1.3 Hardware Design		14
3.3.1.3.1 MOSFET H-BRIDGES with PWM Capability		16
3.3.1.3.1 Relay Switching		20
3.3.1.4 Software Design		22
3.3.2 RF Communication System		24
3.3.2.1 Antenna Design		25
3.3.2.2 Serial Communication		26
3.3.3 Wireless camera		27
3.3.4 Graphical User Interface (GUI)		29
3.3.4.1 Microsoft Comm. Control 6.0		30
<b>CHAPTER 4 RESULTS AND DISCUSSIONS</b>		32
4.1 Introduction		32
4.2 Final GUI		32

4.3	Final Mobile Platform and Microcontroller	33
4.3.1	PIC Troubleshooting	39
4.3.2	Troubleshooting of the MOSFET Circuit	41
4.4	Conclusion	43
<b>CHAPTER 5</b>	<b>CONCLUSION</b>	44
5.1	Conclusion	44
5.2	Recommendations and future works	44
