ABSTRACT

The potential of agricultural residue as raw material in particleboard manufacturing industry is globally investigated. This study is an attempt to evaluate the possibility of producing particleboard from rice husk, an abundant source from rice milling industry. Several chemical analyses were conducted including ash, lignin, holocellulose, alpha-cellulose, alkali solubility and alcohol toluene solubility. From the experiment, rice husk determined to have large amount of ash content (15.06%). Particleboards were produced by mixing rice husk with a commercial binder called urea formaldehyde (UF) at three different density levels namely as 650 kg/m^3 , 700 kg/m^3 and 750 kg/m^3 . Two levels of resin content (10% and 12%) and two different particle sizes (0.5 mm and 1.0 mm) were employed. The mechanical and physical tests were performed on the boards conforming to the European Standard (EN 310:1996, EN 317:1996 and EN 319:1996). Board from 1.0 mm particle size provided the highest value of modulus of elasticity (MOE) (1823.04 MPa) and modulus of rupture (MOR) (8.26 MPa) at 750 kg/m^3 density level with 12% resin content. Highest performance of internal bond strength (IB), water absorption (WA) and thickness swelling (TS) were obtained from the smaller particle size was 0.83 MPa, 46.69% and 19.26%, respectively. This study revealed that most boards were not able to satisfy the minimum requirement by European Standard (EN 312-3:1993). Rice husk board still has the potential to be applied as specific end usage and further study needed to enhance the performance.

ACKNOWLEDGEMENTS

Alhamdulillah and thank to God that I am able to complete this research project in the given time. Upon completion of this project, I would like to express my gratitude to many parties. I wish to express my gratitude and high appreciation to Prof. Dr. Suhaimi Muhammed as being the great supervisor. This project has been complete successfully with his teach, guidance, information and also knowledge given to me. The real appreciation and thanks extended to my colleagues Faizah Fauzi and Nor Suhaina Shahidan for continuous advices, information and encouragements.

I also would like to express my sincere thanks to the staffs of Wood Industry Department as followings: Dr. Shaikh Yamani, En. Amran, Pn. Junaiza, Cik Zalifah, En. Rudaini, En. Sardi and En. Shahril Izani, who are helping me in completing this project. Thank you so much to all of them. Without their cooperation and help, this research project cannot be successfully completed.

I owe special thanks to Universiti Teknologi MARA and Ministry of Science and Technology (MOSTI) for providing academics and financial support (PGD scholarship).

In particular, my heartfelt thanks to my parents En. Abu Bakar Neemat and Pn. Siti Ainah Selamat for their continuous support and encouragement during my studies. Thanks are extended to my siblings and friends.

Finally, my warmest thanks go to all who are directly or indirectly giving their cooperation, motivation and support for me from the beginning until the last day of completion this research.

Nur Afidah Abu Bakar

LIST OF PLATES	ix
LIST OF ABBREVIATIONS	x
CHAPTER 1 INTRODUCTION	
1.1 Background	1
1.2 Problem statement	3
1.3 Significance of study	4
1.4 Objectives of study	5
CHAPTER 2 LITERATURE REVIEW	
2.1 Raw materials for agricultural composite board	6
2.2 Availability and distribution of rice	8
2.3 Rice husk	9
2.3.1 Chemical characteristics	11
2.3.2 Anatomical characteristics	15
2.4 Utilization of rice husk	17
2.5 Urea formaldehyde resin	19
2.6 Particleboard	21
2.6.1 Particleboard manufacturing process	21
2.6.2 Properties of particleboard	23
2.6.2.1 Effect of particle size	24
2.6.2.2 Effect of resin content	25
2.6.2.3 Effect of board density	26
CHAPTER 3 MATERIALS AND METHODS	
3.1 Raw materials	28
3.2 Chemical analysis	28
3.2.1 Determination of ash content	29
3.2.2 Determination of alkali soluble (1% NaOH)	30
3.2.3 Determination of alcohol-toluene soluble	31
3.2.4 Determination of lignin content	32
3.2.5 Determination of holocellulose content	33
3.2.6 Determination of alpha-cellulose content	34
3.3 Raw material preparation	35
3.3.1 Particle conversion	36
3.3.2 Screening	37
3.4 Physical characterization of rice husk particle	37

3.4.1	Bulk density	38
3.4.2	Particle analysis	39
3.5	Preparation of rice husk reconstituted board	40
3.6	Mechanical properties testing	43
3.6.1	Bending strength	43
3.6.2	Internal bond strength	45
3.7	Physical properties testing	46
