MUHAMMAD AMMAR HAZIM BIN MOHD RADI

Title

**Household Behaviour and Recycling Practise on Waste Management of
Village Areas at Kampung Kurong Tengar, Kuala Perlis, Perlis**

Accepted in partial fulfilment of the requirements for a Diploma in Town and
Regional Planning

Supervisor : _____ Mohd Roswodi Mat Zin

TPS352 Coordinator : _____ Dr. Nor Eeda Hj. Ali

Programme Coordinator : _____ Dr. Norainah Abdul Rahman

ACKNOWLEDGEMENT

Firstly, I would like to thank God giving me opportunity to finish my Planning Project Paper for my final year of Diploma. I also would like to thank to my supervisor Mr. Mohd Roswodi Mat Zin who always helping me and guiding me along my journey to complete this task successfully.

Besides that, my appreciation goes to Dr. Nor Eeda Hj. Ali as the coordinator of this subject TPS352 Planning Project Paper who always giving us support and guide to make sure my final year project goes well.

On the other hand, big thanks also to my lecturer Miss Ana Kashfi Muhamad as the resource person for this subject who teach us with full of her heart and also her big effort to ensure our final year project are on the track as planned before in the early stage.

Finally, thank to my beloved friends that always be there for me and always help to whenever I have a lot of questions in my mind. Million thanks also for my beloved parents who always give me support in my journey to complete this subject and provide me good facilities in terms of Internet support, financial and much more. This final year project is dedicated to them as the determination of all their contribution towards me.

ABSTRACT

Studies have been conducted on household behaviour and recycling practise on waste management in villages area where nowadays the problems and issue of solid waste management are mostly come from the household. The problems also when their knowledge to manage all wastes are very low and their attitude towards recycling practise. Therefore, a method to know how the ways of householders are managing their waste as well as to identify their effort towards recycling practise have been conducted by a questionnaire survey to the residents of the study area. This paper has founded some findings upon the aim of this study where all respondents have stated their behaviour and attitude towards the solid waste management from home and recycling practise as their habit to manage their wastes. Apart from that, this study founded that most of the residents in the study area are less to manage their wastes from home properly and this will affect the increasing statistics of solid waste production. Most of the residents also do not practising recycling activities as other ways of managing solid waste from home. Thus, at the end of this study paper has included some recommendations in physical context to overcome this issue and to reshape the new habit of managing solid waste among the householders. Besides that, the recommendation also met the demands from the respondents as asked in the questionnaire survey conducted. This study hopefully would be implemented by the local authorities and could be inserted in the new guideline for future development in conjunction to overcome this big issue and problems that we are facing now and forward.
