ACKNOWLEDGMENT

Alhamdulillah, Thanks God Almighty to give the guidance and blessing that give me a chance to prepare this assignment for the final year study and my hopes is to make a very good result based on a research info that I've been collected. The deepest appreciation and gratitude to the Department of Town and Regional Planning Tawau, Sabah for being able to helped me and give me the necessary information to complete this final year project assessment.

First of all, this appreciation has dedicated to my research supervisor, Madam Kamarul'ain Kamal because willing to spend time, gave advice and useful comment in making this assessment. In this opportunity, not forgotten I would like to say thanks to my parents because for their encouragement and in terms of moral support throughout the course during the process preparing the final study at a predetermined time.

Finally, this gratitude I would like to say big of gratitude to all energy, tutoring, encouragement idea has shared with me either they involved directly or indirectly in helping me to accomplish this Assignment TPS 352.

ABSTRACT

Information related to public recreation areas in the study area, there are several methods that have been identified that can be used by residents around the area to do daily activities such as recreation, exercise, and strengthen social ties between residents in the area of Taman Ria 6's, Tawau. Methods such as parking, playground, benches, and jogging tracks are very necessary, this is because there are many residents who do various activities around the area. In addition, through the information available based on the online questionnaire, there are some problems that have been known around the public recreation area in Taman Ria 6's. Among the problems that arise are the lack of maintenance and abandoned facilities, the lack of active recreational activities and passive recreational activities. Vandalism and lack of security in this public recreation area. The use of data collection based on online questionnaires can be used by researchers to obtain data faster and interactively.
