ABSTRACT

This paper provides the determinant of tax revenue in Malaysia. There are independent variables are the gross domestic product, inflation, and exchange rate with the dependent variables which is tax revenue. This study to want to know the relationship between the independent and dependent variable. It is because from the previous study there are different result have been found. So, this study examines the relationship using Eviews10 to run the data. This study used time-series data that cover one country is Malaysia for 30 years from 1989 until 2018. Based on the results from the test that is conducted in this study, exchange rate have a negative relationship on the tax revenue. Meanwhile, the inflation and gross domestic product have a positive relationship with the tax revenue.
