ABSTRACT

This paper identify the factor that determine household final consumption in Malaysia based on gross domestic product, population, consumer price index and interest rate. Whereby, in this study is to identify whether there is relationship between dependent and independent variables. The methodology used involved collection data for each variables selected in Malaysia since 1988 until 2017. The test are to investigate the relationship between each variables towards factors on households consumption in Malaysia. Thus, the result shows the independent variables has positive relationship towards dependent variables.
