A DISSERTATION SUBMITTED TO THE MARA INSTITUTE

TECHNOLOGY IN FULFILMENT OF REQUIREMENT FOR

THE BACHELOR BUSINESS ADMINISTRATION

(TRANSPORT)

MAY 1997

ABSTRACT

This exercise was written to study the viability of Klang Valley Distribution Terminal vis a vis current distribution system of petroleum products. The objectives of this study is to provide managerial criteria on the contemporary issues relating to the current distribution system operations and problems rose from it that effect the efficiency of distribution with reference to Petronas Dagangan Berhad and how the existence of KVDT can help to improve the whole system of distribution.

Data for the study were collected through interviews and observations. The new distribution system is better than the previous one in that problems such as delay, safety and scheduling are overcome.
