## ABSTRACT

The internship training (IT) component in a university's curricula adds tremendous value to a degree programme by enhancing the employable skills and used to produce high-quality graduate. It is distressing to discover, however, that the process for registration of students in the IT program is still questionable and manually done. Apart from the manual selection of placement done by the student's individually, a suggested preferable list of placement among the organization is vital, in order to provide a suitable training environment for them. The purpose of this paper is to assess the process of registration of placement in the organization for the student from Universiti Teknologi Mara Melaka Kampus Jasin.. The focus of this study is placed on the process of defining the placement for the student's IT using a Ruled-Based approach. The criteria used for the approach are: student registered address, CGPA and also the company requirement for student. To achieve this, a web-based system using Coldfusion as interface and Oracle as the database have been used. The results from this system indicate that the coordinator is satisfied that the students have chosen their best placement for their IT program as per suggested by the system. The paper provides a basis for enhancing and developing effective IT practices as well as providing a reliable system to positively influence future student of the IT industry.

**Keywords:** Internship training, practical training, industrial training, higher learning, student;

<b>LIST OF TABLES</b>	xi
<b>LIST OF ABBREVIATIONS</b>	xii
<b>CHAPTER ONE: INTRODUCTION</b>	
1.1 Background of the study	1
1.2 Problem Statement	2
1.3 Problem Solutions	3
1.4 Objectives	3
1.5 Project Scope	4
1.6 Project Stakeholders	4
1.7 Significance of Project	4
<b>CHAPTER TWO: LITERATURE REVIEW</b>	<b>5</b>
2.1 Internship Training	5
2.2 Web-Based System and Platform	6
2.2.1 The Characteristic of Web-Based System	8
2.2.2 The Advantages of Web-Based System	9
2.2.3 Comparison With Client-Base System	10
2.3 Rule-Based System	12
2.3.1 Inference Engine Method	15

2.3.2	Forward Chaining	16
2.3.3	Backward Chaining	17
2.3.4	Comparison between Forward and Backward Chaining	18
2.3.5	Short Case Studies	20
2.3.5.1	Workflow	20
2.3.5.2	Configuration	20
2.3.5.3	Mining	21
2.3.6	System Example	22
2.3.6.1	A Rule-based System for Web site Verification	22
2.3.6.2	Non-Core Advising System Using Rule-Based	22
2.4	Conclusion	23

### **CHAPTER THREE: METHODOLOGY**

3.0	Introduction	24
3.1	Research Framework	24
3.2	Details of Research Model	25
3.2.1	Requirement and Planning	26
3.2.2	User Design	28
3.2.2.1	Context Diagram	29
3.2.2.2	Data Flow Diagram	31
3.2.2.3	Prototyping	34
3.2.2.4	Development of the Rule Based System	42
3.2.2.5	User Testing	43
3.2.2.6	Feedback	46
3.2.3	Construction	46
3.2.4	Implementation	46
3.4	Requirement	47

### **CHAPTER FOUR: RESULT AND FINDINGS**

4.0	Introduction	49
4.1	Forward Chaining	50
