<b>ABSTRACT</b>	<b>xiii</b>
<b>CHAPTER 1: INTRODUCTION</b>	<b>1</b>
1.1    Background of Total Harmonic Distortion	1
1.2    Inverter	2
1.3    Objectives of the Project	3
1.4    Problem Definition	4
1.5    Project Organization	5
<b>CHAPTER 2: LITERATURE REVIEW</b>	<b>6</b>
2.1    Introduction	6
2.2    Principle of Operation	6
2.2.1    Half Bridge Inverter	6
2.2.2    Full Bridge Single Phase Inverter	10
2.3    Pulse Width Modulation	12
2.3.1    Introduction	12
2.3.2    Theory of Pulse Width Modulation	13

2.4	Performance Parameters	25
2.5	Filters	27
2.6	Review of Previous Methods	28

## **CHAPTER 3: METHODOLOGY** **32**

3.1	Introduction	32
3.2	Hardware Design for Pulse Width Modulation	34
3.3	Development of Pulse Width Modulation Software by M68HC11E2	38
3.3.1	Assembly Language	38
3.3.2	Assembly Language Programming	38
3.3.3	Designing the switching pulses	39
3.3.4	Software Development Tools	41
3.3.4.1	MiniIDE	41
3.3.4.2	HC Loader	42
3.3.4.3	Microcontroller Port	44
3.3.4.4	Operating Modes	45
3.3.4.5	Serial Communication Interface	47
3.4	Design Overview of Inverter	48
3.4.1	SPWM Strategy	48
3.4.2	Power Circuit	49
3.4.3	Driver Circuit	50
3.4.4	Switch	52
3.4.5	Switching Edges	54
3.4.6	Deadtime	55
3.4.7	Output Filter	56
3.4.8	Steady State Operation	58

## **CHAPTER 4: RESULTS AND DISCUSSION** **62**

4.1	Introduction	62
4.2	Simulation result on single phase inverter	62
4.3	Hardware result on microcontroller and inverter	67
4.3.1	Result on prototype for microcontroller M68HC11E2	67

4.3.2 Result on dead time	70
4.3.3 Result on inverter performance	72
4.3.3.1 Without filter	72
4.3.3.2 With filter	77
<b>CHAPTER 5: CONCLUSIONS</b>	<b>84</b>
5.1 Conclusions	84
5.2 Future work	86

## ABSTRACT

In this research, development of a new approach switching technique of a single-phase inverter is presented. Development of bipolar sinusoidal pulse width modulated inverter is aimed to get the desired smooth sinusoidal waveform with minimum harmonics of about  $\pm 10\%$ . However, practical design of the bridge inverter produce output voltage with certain harmonics not as identical as the desired sinusoidal output voltage of an ideal inverter. The bipolar sinusoidal pulse width modulation or SPWM method is proposed to get the desired waveform through proper design of switching pulse. There are two techniques commonly used in SPWM; bipolar SPWM switching and unipolar SPWM switching. The microcontroller M68HC11E2 is used to program the bipolar sinusoidal pulse width modulation (SPWM) waveform. An assembly language is used as software to program the bipolar SPWM waveform. Designing the switching pulses and the bridge inverter are the main part of this research project. Simulation through a computer aided design tool such as PSpice is used before designing the actual inverter. This new technique can be used to produce a bipolar Sinusoidal Pulse Width Modulation (SPWM) for the application of the inverter circuit.
