INTRODUCTION

According to the fourth edition of the dictionary hall, practical means involving or relating to the experience or actual use, not teorikal (Roehrs 2005). The training was conducted for 8 weeks in Munniz Company has helped students understand the real meaning of his working life. This opportunity allows students to apply and integrate theories and concepts learned in class in a real work that environment. It is consistent with the objectives of this program are divulging personal students to real working environment, enhance students' knowledge of industry / organization and provide opportunities for students to perform tasks in a more challenging work environment.

Furthermore, students are able to look closely at the role of management and provide opportunities for students to establish interpersonal relationships with all levels of employees within the organization and can indirectly help increase the communication skills of students. In reality, working in a team environment to complete the task or project, learning, problem-solving and decision-making within the organization is able to expose students to real organizational culture.

Consequently, industrial training is the best move made by the management of UiTM in producing graduates who excel and are able to meet the needs of an industry or organization.

OBJECTIVE

The main objective of the Industrial Training is to experience and understand real life situations in industrial organizations and their related environments and accelerating the learning process of how student's knowledge could be used in a realistic way. In addition to that, industrial training also makes one understand the formal and informal relationships in an industrial organization so as to promote favourable human relations and teamwork.

Besides, it provides the exposure to practice and apply the acquired knowledge "hands – on" in the working environment. Industrial training also provides a systematic introduction to the ways of industry and developing talent and attitudes, so that one can understand how Human Resource Development works.

Moreover, student can gain hands-on experience that is related to the student majoring so that the student can relate to and widen the skills that have been learn while being in university. Industrial training also exposes the students to the real career world and accustoms them to an organizational structure, business operation and administrative functions.

Furthermore, students implement what they have learned and learn more throughout this training. Besides, students can also gain experience to select the optimal solution in handling a situation. During industrial training students can learn the accepted safety practices in the industry. Students can also develop a sense of responsibility towards society.
