ABSTRACT

The aim of this study is the factor influences of economic growth in selected ASEAN countries. This study used internal determinants are like number of population, unemployment rate and international trade. Secondary data was collected from eight countries from the year 2009 until 2018. Panel data multiple regression analysis is conducted to examine the factors. The estimation result shows that number of population and unemployment rate significantly influences the GDP while international trade is insignificantly effect the GDP. For future studies, it is recommended that used different system to run and regressed the data so that can give different technique and result of the data.

Keyword : GDP, number of population, unemployment rate, international trade
