ABSTRACT

PREDICTING HOMEOWNERS' INTENTION TOWARDS THE ADOPTION OF EDIBLE LANDSCAPE BY USING THEORY OF PLANNED BEHAVIOR MODEL

As known worldwide, the landscaping area for the homeowners usually located in the front yard of the residential property. Some homeowners mixed with the edible plant while some only used the ornamental plant. Leaving the front yards unorganized has caused an unappealing view for the homeowners and passing strangers. Today, edible landscaping became trending among the homeowners, especially in urban or suburban areas. There have been numerous studies on the benefits of edible landscaping such as provides safe and readily available crop, reduce the environmental problem through greening the open spaces, increase biodiversity and also can be an additional source of income but none of them ever mention about the factors that influence people to adopt it particularly in Rawang. This study examines the effect of attitude, subjective norms, and perceived behavioral control towards the adoption of an edible landscape. A survey method questionnaire by using a judgmental or purposive sampling technique was used to collect data from the homeowners in Rawang. This study involved 100 homeowners as respondents. Data collected were then analyzed using SPSS software to find the frequency analysis, descriptive analysis, reliability analysis, correlation analysis, and regression analysis. The findings of this study show that perceived behavioral control has the strongest influence on intention where the beta value obtained was 0.533. In contrast, the attitude has a weak influence on intention towards the adoption of an edible landscape. The findings of this study provide a clear interpretation of the factors influencing homeowners' intention towards the adoption of an edible landscape which can be used by the National Landscape Department and Department of Agriculture to promote this behavior in order to increase the participation of homeowners to get involved in the edible landscaping.

Keywords: Edible Landscape, Theory of Planned Behavior, Attitude, Subjective Norm, Perceived Behavioral Control.

	Page
DECLARATION	i
ABSTRACT	iii
ABSTRAK	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	x
LIST OF TABLES	xi
LIST OF SYMBOLS	xii
LIST OF ABBREVIATIONS	xiii
CHAPTER ONE: INTRODUCTION	1
1.1 Research Background	1
1.2 Problem Statement	3
1.3 Research Questions	4
1.4 Research Objectives	4
1.5 Hypothesis	5
1.6 Significant of Study	5
1.6.1 For Institution	5
1.6.2 For Organization	6
1.7 Scope of the Study	6
1.8 Definition of Key Terms	7
1.8.1 Edible Landscape	7
1.8.2 Residential Landscaping	7
1.8.3 Theory of Planned Behavior	7
1.8.4 Attitude	7
1.8.5 Subjective Norms	7
1.8.6 Perceive Behavioral Control	8

3.8.2	Reliability Analysis	22
3.9	Data Analysis	22
3.9.1	Frequency Distribution	22
3.9.2	Descriptive Analysis	23
3.9.3	Cronbach's Alpha	23
3.9.4	Pearson Correlation Analysis	23
3.9.5	Regression Analysis	23
3.9.6	Pilot Test	23
 CHAPTER FOUR: RESULT AND DISCUSSION		24
4.1	Introduction	24
4.2	Response Rate	25
4.3	Data Cleaning Analysis	25
4.4	Frequency Analysis	26
4.5	Descriptive Analysis	28
4.6	Reliability Analysis	29
4.7	Pearson Correlation Analysis	30
4.8	Regression Analysis	32
4.9	Discussion on Research Question	36
4.9.1	Discussion on the First Research Question	36
4.9.2	Discussion on the Second Research Question	37
4.9.3	Discussion on the Third Research Question	38
 CHAPTER FIVE: CONCLUSION		39
5.1	Conclusion	39
5.2	Recommendation	41
5.2.1	Subjective norms	41
5.2.2	Perceived behavioral control	41
5.3	Limitation of the study	42
5.4	Future research	42
5.4.1	Expand the sample size	42
