ABSTRACT

This study examined the effect of commercial banks' credit on agricultural production in ten countries in South Asia and East Asia. There are research hypothesis were formulated in this study. Data using for this study is annual report of ten countries, statistical bulletin, secondary data and world bank data. Secondary data are collected from previous study research to get the information that have been found by the previous researcher. In this study, there are certain method has been use for this study which are unit root test was employed for this study. Based on previous study, there are significant and positive relationship between commercial banks' credit and the agriculture production. This result signified that an increase in commercial banks' credit given on the agricultural sector will increase the agricultural production. The study recommend that the future researcher can find the impact of other variable on towards agricultural sector in term of finance.
