ABSTRACT

The overview of the report is regarding about the site project that i choose and need to do work at the site project . I choose Maya Masrili Sdn Bhd. I have to know about the reinforcement concrete beam for bridge that I chose for my case study for this report. I also need to know about the project brief of the project, adjacent building surrounding, the mission, vision and objective of the Maya Masili Sdn Bhd.

I have to know about the main organization of thet his company and the company organization. I also have to analyze the scope of work of the site project and the schedule of the project that they do daily, weekly, monthly or yearly. Besides that, I have to justify the design concept of bridge like reinforcement concrete beam bridge and the type that use for the bridge.

I also can identify the type of reinforcement concrete that used at site project. I also give a responsibility to manage and control at site project. My scope at the site is peg the boundaries and make sure the project is follow the schedule. For me the site project follow the rules and in good rating at site.. The legal aspect of the element in reinforcement concrete beam should be follow UBBL.
