**DETECTION OF PREPARATORY WATER SITE SUITABILITY
FOR RICE CROP GROWTH AND YIELD FORECAST**

MOHAMAD IFFAT AIMIN FITRI BIN MOHD ZUBIR

Dissertation submitted in partial fulfillment
of the requirements for the degree of
Bachelor of Surveying Science and Geomatics (Honours)

Faculty of Architecture, Planning and Surveying

August 2020

AUTHOR'S DECLARATION

I declare that the work in this dissertation was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Mohamad Iffat Aimin Fitri bin Mohd Zubir

Student I.D. No. : 2016490624

Programme : Degree of Surveying Science and Geomatics (Honours)
– AP220

Faculty : Faculty of Architecture, Planning and Surveying

Thesis : Detection of Preparatory Water Site Suitability for Rice
Growth and Yield Forecast

Signature of Student : 

Date : August 2020

ABSTRACT

Paddy is one of the main and largest crops especially in northern Malaysia. In this case, paddy has become one of the largest carbon storage in Malaysia. Apart from being a staple food in the country, it also plays a role in reducing the effects of greenhouse gases. Therefore, it is very important to study the contribution of rice of early water supply towards the healthiness and productivity of this crop. This study can be achieved by analyzing satellite images and calculating water boundary areas in the selected study areas for the different seasons in Malaysia. This study was carried out at a paddy cultivation area in the UiTM Perlis area where there were more than 60 paddy fields. The data used is the image from Spot-7 as well as the data obtained by performing in-situ data collections. For data processing, software ArcGis had been used. The results shows the impact of early water supply during the first growth's stage towards the growth and yield production of the selected paddy field.

TABLE OF CONTENTS

CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	viii
CHAPTER ONE INTRODUCTION	10
1.1 Research Background	10
1.2 Problem Statement	11
1.3 Research Question	12
1.4 Aim	12
1.5 Objectives	12
1.6 Scope and Limitation	12
1.7 Significance of Study	13
CHAPTER TWO LITERATURE REVIEW	14
2.1 Introduction	14
2.2 Rice Crop Growth	14
2.3 Rice Crop Growth Factors	14
2.4 Water Supply in Rice Growth	15
CHAPTER THREE RESEARCH METHODOLOGY	17
3.1 Introduction	17
3.2 Flowchart of Methodology	18
3.3 Planning	19

3.3.1 Study Area	19
3.3.2 Software	20
3.4 Data Collection	20
3.6 Data Processing	22
3.6.1 Object Based Image Analysis (OBIA)	22
3.6.1.1 Physical Boundary of Waterbody	23
3.6.1.2 Area Comparison	23
3.6.2 Normalized Difference Water Index (NDWI)	23
3.6.2.1 Soil Moisture Coverage Area	24
3.8 Result and Data Analysis	25
CHAPTER FOUR RESULT AND ANALYSIS	26
4.1 Introduction	26
4.2 Image Classification Using Object Based Image Classification (OBIA)	26
4.2.1 Area of Water Boundary on Dry Season	26
4.2.2 Area Water Boundary on Wet Season	28
4.2.3 Data Analysis	29
4.3 Normalized Difference Water Index (NDWI)	30
4.3.3 NDWI on Dry Season	30
4.3.2 NDWI on Wet Season	31
4.4 Relationship of water supply towards the paddy's growth and yield.	32
CHAPTER FIVE CONCLUSION	36
5.0 Conclusion	36
