

**DETERMINATION OF SOLAR FLARES IN RADIO FLUX AND
COMPARING THE TYPES OF SOLAR FLARES IN X-RAY REGION**

MOHD FAIEZ BIN ALI

**Final Year Project Report Submission in
Partial Fulfillment of the Requirements for the
Degree of Bachelor of Science (Hons.) Physics
in the Faculty of Applied Sciences
Universiti Teknologi MARA**

NOVEMBER 2010

This Final Year Project Report entitled “**Determination of Solar Flares in Radio Flux and Comparing the Types of Solar Flares in X-Ray Region**” was submitted by Mohd Faiez Bin Ali, in partial fulfillment of the requirements for the Degree of Bachelor of Science (Hons.) Physics, in the Faculty of Applied Sciences, and was approved by

Miss Zety Sharizat Binti Hamidi
Supervisor
B. Sc. (Hons.) Physics
Faculty of Applied Sciences
Universiti Teknologi MARA
40450 Shah Alam
Selangor

Assoc. Prof. Md Yusof Theeran
Project Coordinator
B. Sc. (Hons.) Physics
Faculty of Applied Sciences
Universiti Teknologi MARA
40450 Shah Alam
Selangor

Dr. Ab Malik Marwan Ali
Head of Programme
B. Sc. (Hons.) Physics
Faculty of Applied Sciences
Universiti Teknologi MARA
40450 Shah Alam
Selangor

Date: 22 NOV 2010

ACKNOWLEDGEMENT

Upon the completion of this project, I would like to express my greatest gratefulness to ALLAH S.W.T for giving me strength and faith upon the completion of this study. I would like to thank to my supervisor of this project, Miss Zety Sharizat Binti Hamidi for the valuable guidance and advices. She inspired me greatly to work in this project. Her willingness to motivate and entertaining me contributed tremendously to my project. I also would like to thank her for showing me some example that related to the topic of my project. And not forgetting my co-supervisor, Dr. Zamri Bin Zainal Abidin, who has always giving advices on my research.

Besides, I would like to thank the authority of both of University Malaya (UM) and Mara University of Technology (UiTM) for providing me with a good environment and facilities to conduct this project.

Finally, an honorable mention goes to my families and friends for their understandings and supports on me in completing this project. Without the help of the particular that mentioned above, I would face many difficulties while doing this project. And once again, thanks to everyone.

Mohd Faiez Bin Ali

CHAPTER 1 INTRODUCTION	1
1.1 Background of study	1
1.2 Problem statements	6
1.3 Objectives of study	6
1.4 Significant of study	6
1.5 Scope and limitation of study	7
CHAPTER 2 LITERATURE REVIEW	8
2.1 Solar Flares And Radio-Communication Signals	8
2.2 Solar Flares And CMEs Association	10
2.3 A Study on the Effects of Geomagnetic Storm on GPS in Malaysia	13
CHAPTER 3 METHODOLOGY	16
3.1 Data Acquisition	16
3.2 Data Selection date	16
3.3 Permission	17
3.4 Data Calculation And Analyzation	17
CHAPTER 4 RESULTS AND DISCUSSION	18
4.1 Graphs Axis And Units	18
4.2 Line Markers And Classification	18
4.3 Graphs And Tables	19
4.4 Solar flares production for each corresponding classes	38
4.5 Relationship of solar radio flux and solar flares	38
4.6 Correlation between solar flares effects and to real time phenomena in Malaysia	39
4.7 Solar flares classes and its effects towards earth	40

ABSTRACT

DETERMINATION OF SOLAR FLARES IN RADIO FLUX AND COMPARING THE TYPES OF SOLAR FLARES IN X-RAY REGION

The Sun is one of the prominent features in our galaxy. The Sun itself has tremendous secrets that are still need to be study for example the energy in term of photon which is driven throughout the light which emitted from the Sun. Sun has very complicated features as it has numbers of activities that play important role in our life on earth. It is also known as the solar activities. In this study, one of the solar activities that are presented is the solar flares. Solar flares are kind of explosions or eruptions that occur due to the changes of magnetic field lines of the Sun. Solar flares can be classified into 3 classes as each type has their own effects towards earth. These flares are often associated with emerges of solar radio flux. Data were gathered from the NOAA (SWPC) and the theoretical parts were presented throughout this study. The total numbers of flares and its relation with solar radio flux emitted at a wavelength of 10.7 cm were presented in this study.
