ACKNOWLEDGEMENT

Praise to Allah for four (4) months I undergo my internship that begins on early December last year till end of March this year, I finally successfully completed my Industrial training. For the remaining 4 months more that I have to continue my training in order to complete my course, I pray to Allah hoping my journey is in His bliss. I also would like to extend my thankfulness to the most precious persons in my life, my father and mother for all their moral support, financial support and also to my friends for never ending reminding me to always be honest and trustworthy during my training here. As for my supervisor from Universiti Teknologi Mara (UiTM) Mrs. Zuraihana Binti Ahmad Zawawi. Thank you for all the reprimand and guidance as it is very helpful for me in completing my report. Last but not least I would like to extend my appreciation to my industrial supervisor, Mr. Tan and Miss Sue for their advices and patiently guiding me through while I working here as a trainee. Not forgotten for all the staffs working at Peck Chew Piling (M) Sdn Bhd. very much appreciate for their entire kindness helping and teaching me when I'm working there. I am very lucky to have such a helpful colleagues and I never felt left out in any situation.

I am entrusted to undergo my industrial training at Peck Chew Piling (M) Sdn Bhd for four (4) months before I can complete my subject course in order to graduate. For now I have completed half of the period required for my training. During these 4 months working here I am exposed to many new things which are very valuable for me to learn and carry out with devotion when I face the real world of working in the future. Undergoing for industrial training has become one of the curricular that college student compulsory to attend especially for those who studied at IPTA. The motive of this action is to expose students and let them experience the environment of the real world of working before graduating. It is also to prepare students to face the real challenge and learn how to find solution when problem encountered besides completing the course. This exposure not only will prepare the students but it is also a great opportunity to gain knowledge at industry. Besides that, it can prepare students on how to polish more their soft skill especially on how to communicate with others and learn to do work in a group. At college students usually communicate with people around their ages but when working there are differences in ages and this required communication skill.
