**Final Year Project Report Submitted in
Partial Fulfilment of the Requirements for the
Degree of Bachelor of Science (Hons.) Physics
In the Faculty of Applied Sciences
University Teknologi MARA**

MAY 2011

ACKNOWLEDGEMENTS

Firstly, I would like to express my grateful to Allah S.W.T for giving me to mercy and in a good of health to finish my final project. Besides that, I like to thankful and respected my lecturer as our supervisor Prof Dr Mohd Kamil Abd. Rahman who had given a lot of co-operation and favour to guide me along the process in completing this project. I am also thankful a lots to my co-supervisor, NorSyafiqah Mohamed Kassim who had given me more information and co-operation to completing this project.

Then, thanks a lot to my family who gives me moral support and encourage to successfully in completing my project. For those people around me who gives some information and advice that related to our project. No words could represent my gratitude and express my thanks for all the sacrifices.

Lastly, I hope my project will help me to obtain more knowledge and expose in the fall of science and technology as well as to introduce some basic technique and tools that can be use in the future especially in photonic fields.

Nor Aina Che Manaf

METHODOLOGY	
3.1 Equipments	23
3.2 Design of Y-Junction optical waveguide	24
3.3 Simulation of Y- junction optical waveguide	28

3.4	Fabrication of symmetrical Y-junction optical waveguide	32
3.5	Coating of gold into symmetrical Y-junction coupler	37
3.6	Experimental set up for measurement of symmetrical Y-junction coupler	40
3.7	Flow chart of methodology process	41

CHAPTER 4

RESULT AND DISCUSSION.

4.1	1x2 symmetrical Y-Junction	
4.1.1	Modelling and Design of symmetrical Y-junction	42
4.1.2	Simulation of Symmetrical Y-junction	44
4.1.3	Experimental and Measurement	51
4.2	1 x 4 Symmetrical Y-junction	
4.2.1	Modelling and Design of symmetrical Y-junction	54
4.2.2	Simulation of Symmetrical Y-junction	57
4.2.3	Experimental and Measurement	62

ABSTRACT

DESIGN, SIMULATION AND FABRICATION OF SYMMETRICAL Y- JUNCTION OPTICAL WAVEGUIDE COUPLER

Today, optical network is developing rapidly as growing capacity demand in telecommunication system is increasing. Therefore, the communication by optical fibre is potentially the most rewarding of all communication. In this project, multi-mode optical fiber (multimode fiber) is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. Typical multimode links have data rates of 10 Mbit/s to 10 Gbit/s over link lengths of up to 600 meter. Symmetrical Y-Junction coupler is a basic element of many optical waveguide coupler which signals from one input guide all and the received power divided between two or four output port. The purpose of this project is to design, simulate, and fabricate of 1x2 and 1x4 symmetrical multimode Y- junction optical waveguide coupler. The focus on this project is to determine the optical output properties by making various branching angle of Y-junction and by coating of gold to enhance the reflectivity of the waveguide. All the design and simulation are done using AutoCAD and ZEMAX software respectively. The analysis is based on how the output power split symmetrically and the output performances which are insertion and excess loss of the model device. In this project, the 1x2 and 1x4 symmetrical Y-junction resulted in approximately 50% and 25% desired output splitting ratio respectively.
