ABSTRACT

The term "reverse engineering" refers to an activity that is a process step by step by which the details design of a product is analysed, study, observe or redesign using a physical part as a starting point. This paper presents results of a study about re-design an existing digital clock through reverse engineering process and giving a new meaning of usage and form without changing the internal component of the digital clock product. Nowadays, people relies on alarm clocks to start the day. Digital clocks are becoming too popular because their advantages make it easy for you to check the time quickly, accurately and correctly. **Logan** multi-functional a digital clock is a type of clock that displays the current time with a digital method in 12 hour format as HH:MM:SS. This product features a multifunction 6 in 1: clock, alarm clock, temperature, calendar, timer and the light of the clock will get on by clapping. To see the current time, just tap the snooze button and you'll get five seconds of time shown. A built-in night light allows easy viewing of the time in the dark with a gentle hit on the table within the range of 1 meter by touching any place on product, in convenience of reading the time at night. Then, the light will automatically go off in just 5 seconds. This product with Temperature Humidity Sensor can accurately detect the temperature and humidity in your house. This product features a large display with oversized red numbers against a black LED display. The time can be set 12 hours or 24 hours easily or see time from a distance hands free. This clock uses Triple A Batteries. This product is specially designed for teenagers to help them normalize their sleep schedule and help them focus on getting the shut-eye. Plus, this product ensures them wouldn't miss out on important meeting or classes, so they can snooze away peacefully. This product is designed with three colour combination from black, merlot and alloy orange. These options are for users to pick which one suits their room better. This product is made out of ABS Plastic which also known as Acrylonitrile Butadiene Styrene as it is widely used in electronic housings, auto parts, consumer products, pipe fittings, Lego toys and more. This multi-functional device is ideal for traveling due to its compact and handy size.

1. INTRODUCTION

Written by Ian Wills; Updated January, 2019. Reverse engineering is such common engineering technique that many of us adapt to on a daily basis, even if we are unaware of its use. The purpose of reverse engineering is to deduce design decisions from end products with little or no additional knowledge about the procedures involved in the original production. It often involves taking something (e.g. a mechanical device, electronic component, or software program) apart and analysing its workings in detail, used in maintenance or to try to make a new device or program that does the same thing without copying anything from the original.

It often involves taking something (for example a mechanical device, electronic component, or software program) and analyzing how it works in details, using it in maintenance or to try to create a new device or programme that does the same thing without duplicating anything from the original product.

Nowadays product design produces rapidly in variety of forms, functions and themes and shorten products' life cycles, it is crucial to reduce the product development time to maintain competitiveness in the market. There are eight critical point of views or quality categories that can serve as a framework for strategic analysis: performance, features, reliability, conformance, durability, serviceability, aesthetics and perceived quality (Garvin, 1987). In studies (Pujara and Chaurasia, 2011) showed that young consumers, agree range between 15-18 chose physical features in products which include design, fit, appearance and comfort which matters a lot beside the basis quality.

The rationale behind the Logan's multi-functional digital clock design is that the brain is stimulated to the point that it's telling your body "it's time to get up," which allows for a much more natural morning experience. This product is designed with elegant look and there's nothing difficult about operating this clock. Whether it's for teenagers, this is as basic as it gets. The ultra-portability function as a smart option for travellers who need something that can fit into a suitcase and easy to carry.

The problems of the existing multi-functional digital clock is it looks bulky. In term of appearance, the design is too classic and has lack of attractions among teenagers because they are expecting for a better design.

The problems of the existing multi-functional digital clock can be solved by creating a new multi-functional digital clock design that can be widely used among teenagers so that they can learn to start managing their schedules effectively. This product also can help them start to learn responsibility and begin to learn to get up. To get ready and to get out of the door on time in the mornings. This product is also different from the existing multi-functional digital clock where it is made out of ABS Plastic and is widely used in industries because of the characteristic of plastics itself that has a criteria of toughness, high wear resistance, high impact resistance, easily processing and corrosion resistance.

In conclusion, this multi-functional digital clock is a great option and ideal for teenagers as it can help them to wake-up early in the morning and be on time on time. This basic alarm clock for teens also comes with three different colour options and convenient for travelling. This alarm clock features all the expected features such as clock, snooze, customized alarm settings, temperature, timer, calendar and a loud alarm clock. In addition, people do not have to be worried of this product as this product will solve the problem. Last but not least, with embossed logo printing, the researcher will be able to give invitations an interesting texture

that encourages anyone to pick up and hold it. This also will attract consumer's attention and help to raise awareness of the brand.

2. DESIGN CONCEPT

Klein, Moon, and Hoffman (2006) describe sense making or new developments as "a influenced, repeated effort to understand connections (which can be among people, places, and events) in order to interpret the development of ideas and act effectively. Design Concept includes the activities that commence from a design brief — that is, a description of what to do, defining the problems, study the existing branding or product and the decision making. The activities are to identify needs, establish target specifications, select, and determine the concept of a product.

LOGAN multi-functional digital clock is based on Hi-tech style especially for teenagers. The problems of the existing multi-functional digital clock are the size of the clock is bulky and difficult to hold for those who has small hands. In term of appearance, the design is too classic and has lack of attractions among teenagers. Other than that, the objectives of this design are to apply the suitable material that are more durable, to give it a non-slippery surface on the product to make it easier for users to carry and to make it bolder and tough that reflect the nowadays lifestyle of nowadays teenager. The design criteria are hi-tech, lightweight, less bulky design, ergonomically in handling and texture friendly. The target user is for teenagers.

3. METHODOLOGY

Observation is the process, techniques and method of watching someone or something. Often, observation is an informal action, but it can also be formal and involve data collection. An observation can also be the collected information itself. For the methodology process, they are few stages that have been involved in this project (Figure 3.1: Flow Chart of Methodology).

Face to face interviews have been conducted to 4 respondents age 19-25 regarding to performance, features, reliability, conformance, durability, serviceability, aesthetics and perceived quality of existing digital clock. Role play also conducted through interviews between researcher and respondents to get information regarding selected digital clock.

Next, the final mock-up of LOGAN Multi-Function digital clock is reviewed by 13 respondents age 20 to observe respondents' opinions on aesthetic value and perceived quality based on chosen partial style, Hi-Tech. Final product of LOGAN Multi-Function digital clock completed after mock-up development amendments from peers' mock-up reviewed.

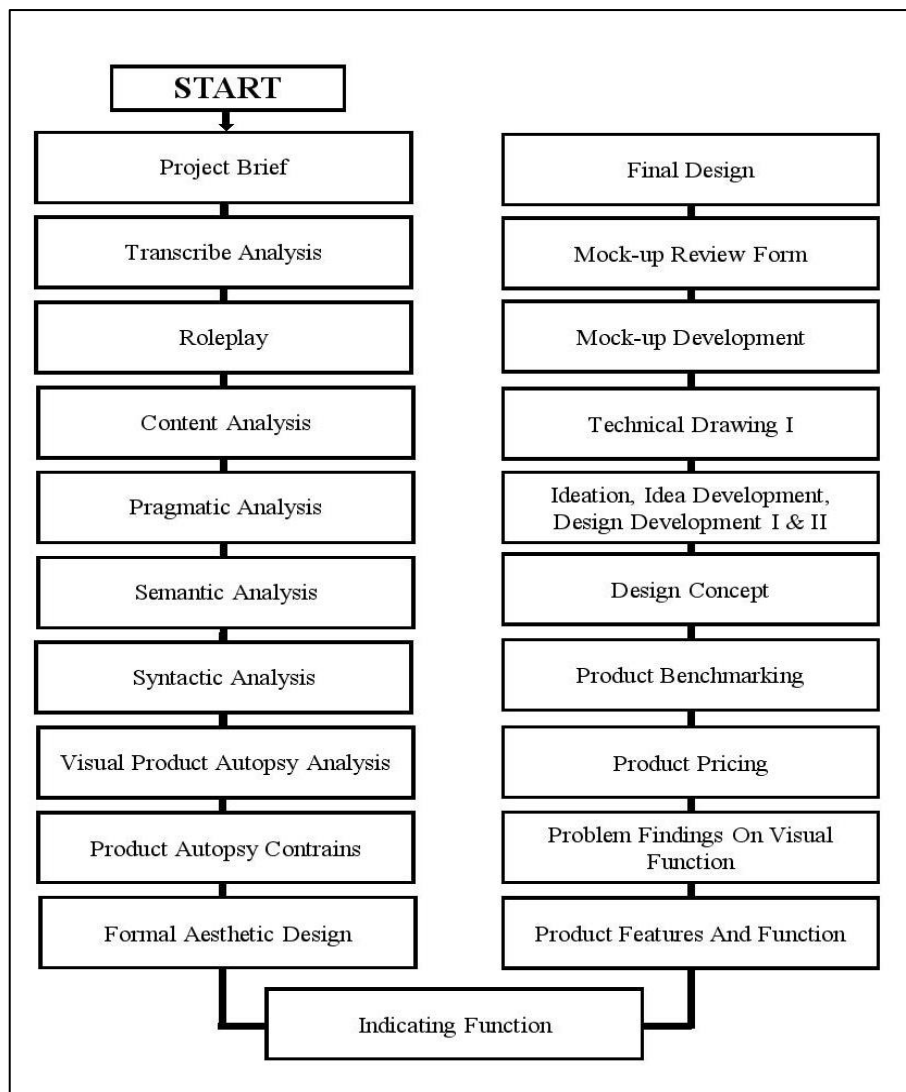

Figure 3.1: Flow Chart of Methodology

3.2 Transcription is the action of providing a written account of spoken words. In qualitative research, transcription is conducted of individual or group interviews and generally written verbatim (exactly word-to-word). Qualitative data collected as audio-visual recordings are ideally transcribed as textual files for archiving and sharing. Consider transcribing conventions, instructions, guidelines and a template to ensure quality and consistency across a data collection. Hereby is a transcribe analysis from respondent regarding the study of existing multi-function digital clock

The conversation was recorded between buyer (A) and the seller (B) on Sunday, 23/02/2020 at 5:45 pm at MR DIY outlet **Central Square**, Sungai Petani.

<p>A: Assalamualaikum, seller. B: Waalaikumsalam. A: I came across this beautiful alarm clock near the shelf on the left. I want to buy this alarm clock because this watch looks gorgeous. I need this clock for my assignment. Then, could you please explain about this watch a little? B: Yes, of course. Okay, first of all, this watch requires three Triple A batteries. Okay, let's install it. (The seller installs the battery on the clock) A: Okay, seller. Wow, it has a cute sound. B: After we insert in the batteries into the clock, it will make a sound, and that was normal. You have nothing to be worried. Okay, then there is a button below, press it, and the sound will automatically stop. A: Oh, okay. So, is there any function of this clock other than being able to show the time of the clock? B: Okay, this clock is also able to show the month, temperature reading and so on. Then we can choose the time format either 24 hours or 12 hours. A: Is this the only shape that we can get from this shop? B: For the time being, yes. A: Oh, so this is the latest? B: Yes, it is.</p>	<p>A: Okay, so what about the colour? Does this store only have this black-flagged alarm clocks? B: There is another colour, which is white. Do you want to see? A: Sure. B: Okay, wait a second. A: Alright. (After a few seconds) B: Okay, this one is white. A: Wow, this white colour is also beautiful. This colour also looks more attractive than the previous one. It looks more elegant. B: I know, right. It looks better than the black one, right? A: Em, may I see it? B: Yes, sure. A: Can I turn on this watch? B: Sure, you can. A: Oh. So if I press this, what will happen? B: Okay, let's give it a try. It will turn off the lights. A: Oh, I see.</p>

<p>B: Okay, this light is not just coming out this way. Even if we lift it, it still can glow. B: Besides, the clock can also light up by just clapping your hand. Look at me doing this. (Clap clockwise) A: May I try? Hahaha. B: The price is reasonable and worth buying. A: Oh. So if I buy this clock, what is the advantages that I could get when purchasing this? B: The advantage is, it will make it easier for you to look at the clock in the night. There is no need for you to reach for your mobile phone to know the time. This watch is lightweight and can be carried anywhere because of its small size and compact</p>	<p>B: You are also studying, right? A: That's right. I'm still learning. With this clock, I can use it at the hostel. B: Right. A: If so, I want to buy this alarm clock. B: Sure, thank you so much. A: Okay. B: Do you want to purchase its battery? A: Is the battery expensive? B: You have to add a little. A: Oh, I see. Okay, I want it. B: Do you want the expensive one or the cheap one? A: The cheap one, as I'm still studying. Thank you, seller. B: You are welcome.</p>
---	--

CONCLUSION

This square digital clock is just the same as the standard you get and you can put on your bedside table. It is 157 mm tall and 87 mm thick. From left to right it measures 157 mm and weighs in at 209 gm. Half the front surface of the clock is taken up by the LCD screen while the other half is left empty. The clock casing is painted black and made out of plastic. The clock comes in one operate piece. It consists of the clock itself while the other is the metal legs. The clock is powered by triple A batteries. The functionality of the watch is rather simple. Apart for the time and calendar, it has any other multifunctions such as , alarm clock, temperature, calendar, timer and the light of the clock will get on by clapping

Nik: Hi guys, so I have bought an alarm clock. Now, I want to ask you all what you think about this alarm clock. Here, take a look at this clock.
Wani & Syaf: Okay, sure Nik!

Wani: Wowww, quickly open the packaging. Syaf.
Syaf: Well, please take a look, hahaha.
Wani: Wait? But where is the manual? There will always be a manual.
Nik: Hm, this box does not provide a manual.
Wani: Hm, such a dull box.
Wani: The packaging looks terrible.
Asyifa: Yea, very bad.
Wani: Huuaaaaaa.
Nik: But even though the packaging is terrible, let's see how it looks inside.

Wani: Agreed! Let's take a look at it first. Just follow on what Nik said.
Syaf, Wani and Asyifa: Hahaha okay.
Wani: In my opinion, the design of the alarm clock seems a bit classic. Before we proceed, what is the function of this clock?
Nik: Typically, the function of the alarm clock is to show the time. Let's insert the battery so we would know if it's good or not.

Syaf: Okay, let's insert the batteries first.
Nik: For this clock, we need Tripple A batteries.
Wani: I see, it's a lot of battery that we need.
Nik: Yes. Hahaha.
Wani, Syaf and Asyifa: Wowww!
Syaf: It sounds too cute.
Wani: Feeling like a child, hahaha.

HiTECH

Nik: By the way, is the sound of this alarm boring or not?
Asyifa: For me, it's quite dull.
Nik: I see.
Asyifa: Yes, I don't like it too.
Syaf: It's okay for boys but not for us. It doesn't fit us.
Asyifa: Yes, it's out of my interest. The clock looks classic enough, but when it started to sound, it doesn't sound very pleasant.

Wani: What is the size of this alarm clock? I mean the measurements?
Nik: Okay, so for the measurements, the tall and the length is 157mm. While the width is 87mm.
Syaf: Oh. It's very compact and suitable to bring it anywhere.
Wani: Yes, because the size is not big but not too small.

Shaf: But why is the screen on the packaging seems a bit different than the actual alarm clock?

Asyifa: I know, right! How could this be? Oh my god, what a fake hope!
Syaf, Wani, Asyifa & Nik: Hahaha!

HiTECH

LOGAN

Nik: Okay, in terms of color, what do you think? From your point of view? Does it fit the design?
Wani: It looks gloomy and effortless.
Shaf: Black!! It looks unattractive because of the color. It should be brighter, so it will look more beautiful.

Asyifa: So the color is black. If it's in the dark, how the clock glow? Wani: Hmm, that's right. How will it look like? Nik: Okay, let me explain. If we place it on a flat surface, for example, on a table, right? When we want to see it glow in the dark, we could just clap like this.

Nik: See, when I clap, it lights up! Apart from that, this watch is also sensitive. Even if I place it like this, it can glow.
Wani: Oh, could it waste the battery?
Nik: It's a waste. If possible, leave the power button on the back in off mode. When we want to set the alarm, just turn it on. Because even if we are off, the clock digit will still appear on the screen.

Wani: Then look at this watch. Provided with day, hour, date. So easy for us to know the time and date.
Nik: Right, if it's a standard clock, it only shows the digit of the hour, minute and second.
Shaf: Yes, I think this is good than enough.
Nik: For more details, this clock can show the hours, minutes, months, weeks and calendars for 100 years. More importantly, it can show temperature readings.

Nik: So, for this watch material, it is made of ABS plastic. It also has a high probability of breaking.
Shaf: Is it expensive?
Nik: You can get this for RM19.00 only. It is also worth buying.
Wani & Syaf: Wow, it is standard with the price and size of the clock. The design is also lightweight.
Wani: Okay, not bad.

Asyifa: Hmm, how to set this alarm?
Nik: As we don't have the manual from the beginning when purchasing it, I tried to explore for myself how to use it and set my alarm that day.
Asyifa: Oh, so how do you set this alarm?

Nik: So this is how to set the alarm. There are buttons to set up at the back. To set it, press the set button for three times or more. Press it in about 5 seconds or more so that the clock will show up the number digit of the hour. So from there, we just need to press the button up and down to adjust the hour. Same for minutes. When you have set the clock, press the set button again to change it for a minute and lastly select it.
Wani & all: Okay, we finally understand.

Wani: Hm this alarm sounds loud?
Nik: This clock is not very loud but can be heard for one room.
Wani: And what kind of sound is that? Isn't other music?
Nik: Only this music, and can not play different songs.
Shaf: I see, okay, I understand.

Shaf: Is it static like this? Because there is a watch that has an ear to make it more interesting.
Nik: Yes, the design is just simple like this. Maybe because the designer wants to make it to look simpler or not complicated?

Asyifa: But we look at it from the side view it does look like a speaker.
Wani: Finally, someone thinks the same as me.
Nik: Yes, it is. Maybe the designer took the speaker's inspiration when he wanted to design this clock.

Asyifa: Sure, it will not be slippery if placed on a surface like this? Look when we touch on the surface, it feels slippery.
Nik: So in your opinion, what needs to be added to the surface?
Shaf: Maybe you can add a liner underneath like a material made of rubber. So it is not easy to move and fall.
Wani: Yes, to reduce friction.

Shaf: I'm not very interested in this kind of design. As for my opinion, you can add something on your design, such as little pattern to match the body part of this watch to highlight it. Or you can add floral patterns.
Wani: That's right Wani. It seems too simple, right.
Asyifa: If it's for men, maybe it's okay, but if it's for women, I don't think so.
Brave: Right!
Shaf: Women like beautiful things.

Shaf: Is there a warranty?
Nik: Oh, this watch has no warranty on this watch. This watch is already cheap.
Wani: Oh, I see
Nik: Besides, this clock doesn't have a brand.
Asyifa: Oh
Wani: It is difficult for students who want to...
Nik: Kind of like saving...
Shaf: Yes, hmm.

Nik: Next, if in terms of ergonomic right. When you hold it, do you feel comfortable?
Asyifa: It's fine because it fits with my big hand to hold.

Wani: Hmm okay because it's easy to grab, like holding a wallet...

Shaf: It also does not weigh much.

Shaf: Hm okay because the button is not very close, so it makes it easier for us to set the alarm.
Wani: Yes, true. There is space between one button to another button.

Nik: It's almost the end of the discussion. So can you all share feedback about this watch in a nutshell only?
Bhaf: In terms of design, it is too simple. And for students who want to buy this watch for their needs every morning is very recommended.
Asyifa: First of all, I'm not too fond of the sound of the alarm issued by this clock because I am the type who has difficulty in waking up from sleep. If possible, I want a song that when heard, is very annoying. I want the sound that makes us easier to wake up, if it sounds like this, it's tough to get up.

FORM	<p>Wani: The packaging looks terrible. Asyifa: Yea, very bad.</p> <p>Wani: In my opinion, the design of the alarm clock seems a bit classic.</p> <p>Asyifa: For me, it's quite dull. Nik: I see. Asyifa: Yes, I don't like it too. Syaf: It's okay for boys but not for us. It doesn't fit us. Asyifa: Yes, it's out of my interest.</p> <p>Syaf: Oh. It's very compact and suitable to bring it anywhere. Wani: Yes, because the size is not big but not too small.</p> <p>Shaf: But why is the screen on the packaging seems a bit different than the actual alarm clock?</p> <p>Asyifa: Yes, it's out of my interest. The clock looks classic enough.</p> <p>Wani: What is the size of this alarm clock? I mean the measurements? Nik: Okay, so for the measurements, the tall and the length is 157mm. While the width is 87mm.</p> <p>Wani & Syaf: Wow, it is standard with the price and size of the clock. The design is also lightweight. Wani: Okay, not bad.</p>

FUNCTION	<p>Nik: Typically, the function of the alarm clock is to show the time. Let's insert the battery so we would know if it's good or not.</p> <p>Syaf: Okay, let's insert the batteries first. Nik: For this clock, we need Tripple A batteries.</p> <p>Nik: By the way, is the sound of this alarm boring or not? Asyifa: For me, it's quite boring. Nik: I see. Asyifa: Yes, I don't like it too. Syaf: It's okay for boys but not for us. It doesn't fit us. Asyifa: Yes, it's out of my interest. The clock looks classic enough, but when it started to sound, it doesn't sound very pleasant.</p> <p>Wani: Hmm, that's right. How will it look like? Nik: Okay, let me explain. If we place it on a flat surface, for example, on a table, right? When we want to see it glow in the dark, we could just clap like this.</p> <p>Wani: Then look at this watch. Provided with day, hour, date. So easy for us to know the time and date.</p> <p>Nik: Right, if it's a standard clock, it only shows the digit of the hour, minute and second. Shaf: Yes, I think this is good than enough. Nik: For more details, this clock can show the hours, minutes, months, weeks and calendars for 100 years. More importantly, it can show temperature readings.</p> <p>Nik: See, when I clap, it lights up! Apart from that, this watch is also sensitive. Even if I place it like this, it can glow. Wani: Oh, could it waste the battery? Nik: It's a waste. If possible, leave the power button on the back in off mode. When we want to set the alarm, just turn it on. Because even if we are off, the clock digit will still appear on the screen.</p>

INDICATOR	TRANSCRIBE
FUNCTION	<p>Nik: So this is how to set the alarm. There are buttons to set up at the back. To set it, press the set button for three times or more. GENERAL SEQUENCES

						
As you can see, this is my multifunctional digital clock that I purchased from Mr. DIY. This clock costs at RM19.00.	There are the digital's clock features at the other side of the box.	Hold the box carefully and pull out the box's cover.	Take out the digital clock from the box.	Take out the manual book of the digital clock from the box.	So these are the contents from the inside of the box.	This is the look of the product that I have purchased. The product only comes in one itself.
						
Open the battery slot to insert batteries.	Insert the batteries inside the battery compartment.	Put on the battery slot to tighten the the batteries's position.	After that, the rear view of the digital clock should be like this.	Right after putting on the batteries, The digital clock will light up a white light and time as displayed. A song also will be played at the same time.	This digital clock uses slotting technique which indicates to on/off when slotting it.	Push the DOWN 'C'/'F' button to change from Celsius to Fahrenheit or Vice versa.
						
Push the UP '12/24' button to change from 12hrs format to 24 hrs or vice versa.	Push the TIME button to set timer in minutes and seconds.	Push the SET button to set up time, date, city and language.	Push the MODE button to change mode to date, day and city.	This is the position of your hand to snooze the alarm.	It lights up when pressing it.	The digital clock will be displayed like this and it is also ready to be used.

ADVANTAGES & DISADVANTAGES

BATTERY

Battery using AAA type.

-battery for this digital clock.

- Able to stand by its own.
- Easy to control.
- Helps user to wake up early by ringing a song.
- Able to light up when sensing around.
- Can easily get the required battery type.
- Easy to slot out the battery cap and sort in back in the battery compartment.

- The buttons are too close with each other and big hands might cover the button.
- The colour is too boring.
- Has an annoying sound.
- Has a slippery surface.

FUNCTIONS

POWER SUPPLY OR SOURCE
Power source form Lithium Ion battery.

TIME - BASE
+ Electronic time base at an accurate rate.
+ Keeps time and the heart of the clock or its heartbeat.
+ Break down the time base into components: seconds, minutes and hours.

DISPLAY OF THE DIGITAL CLOCK
Uses Liquid Crystal Display (LCD) to display the lighted time.

+ Also able to light up by clapping your hands.

DESIGN CONCEPT

LOGAN

DESIGN STATEMENT
DESIGNING A NEW LOOK OF MULTIFUNCTIONAL DIGITAL CLOCK BASED ON HI-TECH STYLE.

DESIGN CRITERIA

- HI-TECH DESIGN
- LIGHTWEIGHT DESIGN
- LESS BULKY DESIGN
- ERGONOMICAL IN HANDLING
- TEXTURE FRIENDLY

PROBLEM IDENTIFICATION

- THE EXISTING MULTIFUNCTIONAL DIGITAL CLOCK LOOKS BULKY.
- IN TERM OF APPEARANCE, THE DESIGN IS TOO CLASSIC AND NO ATTRACTIONS AMONG TEENAGERS.

TARGET USER
TEENAGERS

DESIGN OBJECTIVE

- TO APPLY THE SUITABLE MATERIAL THAT ARE MORE DURABLE.
- TO GIVE A NON SLIPPERY SURFACE ON THE PRODUCT.
- TO MAKE IT MORE BOLD AND TOUGH THAT REFLECT THE NOWADAYS LIFESTYLE OF NOWADAYS TEENAGER.

TARGET MARKET
WORLDWIDE

PRICE
RM60.00

3.4 Mock-up Review is a process whereby the mock-up design is reviewed by peers' which not directly involved in designing the product but suitably experienced to give opinions and input on design whether on design, functionality or perceived quality to improve design of product.

MOCK UP REVIEW FORM

DESIGN	RESPONDENTS	COMMENTS (MALAY)	COMMENTS (ENGLISH)	SUGGESTION
	NURUL ASYIQIN	Surface dia tak sesuai, kena tukar bagi matte surface.	The surface looks not suitable with the design. I guess you should make it look matte.	Jadikan ia matte surface.
	ALIFF RISLAN	Surface tak nampak hitech sangat and lcd display tak berapa jelas.	The surface doesn't look like hi-tech at all. Plus, your LCD screen looks not really clear.	Condongkan sedikit lcd display mengikut ksesuaian pengguna and clearkan surface bagi nampak nice lagi.
	NUR HAFEZAH	Buton nampak cam kebawah sanggallah. Kalau boleh turunkan sikit.	The button is too down. I guess, you should place it at the most-center of the front surface.	Turunkan sedikit buton, simetri dari atas kebawah dan kiri ke kanan.
	ADIB AIEMAN	Speaker holes tu tak menarik kalau lubang2 jee, kena ikut line speaker holes tu yg line biru hang tu..	Your speaker holes doesn't look interesting at all. It's so boring. I guess you should make the speaker holes in line form to make it more interesting.	Jngn bagi speaker holes tu design lubang2, bagi dia bentuk line2 halus..
	FATINAMIRAH	Surface cam tak kenalah dgn design hang.	The surface of the design looks opposite with the design's partial style.	Tukar surface tu jadi nampak hitech.
	AHMAD NASAE	Lcd tu xjelas sngt.. So klawi position dy menegak mungkin sesuai.	The LCD screen looks not really clear. I guess that you should change its position so that people can see the time clearly.	Naikkan sedikit lcd display.
	ARIF AHMAD	Surface dia macam x nampak hitech sangat... Kalau boleh buat surface tu nampak clean.	The surface looks not suitable with the design. I guess you should make it look more clean.	Jadikan surface nampak lebih hi-tech.

DESIGN	RESPONDENTS	COMMENTS (MALAY)	COMMENTS (ENGLISH)	SUGGESTION
	SYAFIQAH HANAFIAH	Bawah tu nampak bulky leh nampak tak stabil.	The base of the bottom surface looks bulky and not stable.	Flatkan terus bawah dia tu.
	HAIKAL MAZMAN	Buton tu tak kenalah dgn design hang..	The design of the button looks opposite with its partial style.	Aku rasa hang kena tukar design button tu..
	FATIN NUR AMLIA	Lcd display tak berapa jelas.	The LCD display looks not clear.	Turunkan sikit LCD display tu.
	MUZZUDDIN	LCD display tu mmg melangung ka?	Is your LCD display is curvy like that?	Aku suggestkan hang bagi rata sikit lcd dia tu.
	AIN NUR FAZIRA	Lcd display kau nampak kebawah sgt, takut orang tak nampak pastu nak kena tengok dokat2 baru boleh nampak.	The position of your LCD display is too down. It can't be seen by people when its too down to the earth because people need to go close with the product to see the time.	Turunkan sikit LCD display kau. Bagi dia tinggi sikit.
	MUHD DANISH	Speaker holes tu cam tak nampak sngt lahh..	I can't see your speaker holes clearly.	Tambah lagi line kat speaker holes tu, yg line biru tu, bagi dia nampak lebih menyerlah.

Figure 3.21: Mock-Up Review Form

Figure 3.22: Final Design

CONCLUSION

As a conclusion for this study, the existing multi-functional digital clock features all the expected features such as clock, snooze, customized alarm settings, temperature, timer, calendar and a loud alarm clock but yet the design doesn't look good enough as it looks

bulky. While in term of appearance, the design is too classic and has lack of attractions among teenagers because they are expecting for well design. The researcher designs this visual to make the process of manufacturing easier in using SLS technology. Due to this, designing a new multi-functional digital clock is one of the solution to fix the problem. The benefits that people can gain by using this multi-functional digital clock is people with small hands can hold the product properly. Plus, people may choose which color they want as it is designed with three colour combination from black, merlot and alloy orange so that it suits their room perfectly. Last but not least, based on the researcher's understanding, reverse engineering is something which is going from tail to head. It is a study of a product on how it is manufactured, finding out manufacturing procedure by that thing which we need to break it down to its parts to figure how it works as a whole.

ACKNOWLEDGEMENT

The author would like to thank to the two lecturer whom have given their support in editing and reviewing the paper. Also thank you for their helpful comments on the earlier draft of this manuscript.
