ABSTRACT

Breast cancer is one of the common reasons of death for women in every country, including Malaysia, and the number of breast cancer cases is rising every year worldwide. This type of cancer happens when there exist lumps or additional tissue mass in the breast which are also known as tumors. The cancer cells can be dangerous if it is a benign cell but not a cancerous cell if it is a malignant cell. In order to classify the breast cancer cells, an accurate and effective classification model is needed. Hence, the main purpose of this study is to develop a model of classification for breast cancer cell prediction. This study implements a machine learning algorithm called Ant Colony Optimization (ACO) algorithm to develop an accurate classification model for predicting breast cancer cells. In this study, the ACO algorithm will be compared with another machine learning algorithm - the J48 algorithm - to compare which brings more precise and effective results. Besides, in this study, the Ant-Miner system also plays an important role, which can train the data several times to achieve the highest percentage of predictive accuracy and make comparisons to achieve a good classification model. The results of this study have shown that a classification model using ACO is as comprehensible and accurate as one using the J48 algorithm due to the predictive accuracy produced. Since the lowest rules number and condition numbers is produced by the Ant Colony Optimization, this study concludes that it is the most suitable algorithm in developing the classification model for predicting breast cancer cells.

TABLE OF CONTENTS

CONTENTS	PAGE
SUPERVISOR'S APPROVAL	ii
DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	viii
LIST OF TABLES	ix
 CHAPTER ONE: INTRODUCTION	
1.1 Background of the Study	1
1.2 Problem Statement	3
1.3 Objective of the Study	4
1.4 Scope of the Study	4
1.5 Significance of the Study	4
1.6 Summary	5
 CHAPTER TWO: LITERATURE REVIEW	
2.1 Breast Cancer	6
2.2 The Cell Nuclei in a Digitized Image of a Fine Needle Aspirate of a Breast Mass	7
2.3 Ant Colony Optimization	8
2.4 Ant Colony Optimization for Rule Induction	8
2.5 Summary	10
 CHAPTER THREE: RESEARCH METHODOLOGY	
3.1 Research Framework	11

3.2	Data Pre-processing	11
3.3	Model Development	13
3.4	Model Validation	19

CHAPTER FOUR: RESULTS AND DISCUSSIONS

4.1	Results of Classification using Ant-Miner	20
4.2	Results of Classification using J48	24

CHAPTER FIVE: CONCLUSIONS AND RECOMMENDATIONS

5.1	Conclusions	26
5.2	Recommendations	26
