## ACKNOWLEDGEMENT

In the name of **ALLAH S.W.T**, the compassionate, the merciful. Praise be to **ALLAH S.W.T**, for His consent I have successfully completed my project paper.

Firstly, I shall always be grateful to my mother and father; **Hasmah bte Siwok** and **Abdul Razak bin Hitam**, who encouraged and supported me spritually and financially, during my years of study leading to the completion of this project paper.

Special thanks must be extented to my respectable adviser, **Puan Noryati Ahmad** for her guidance, for her penetrating comments, and for her patiently reading through the draft and correcting mistakes.

I would also like to thank to **Dr. Rokiah Hassan**, my Course Tutor and also **my lecturers** for their moral support and for being with me all the way.

## ABSTRACT

This is an analytical study done to identify the factors determining the movement of Statutory Reserve Requirement. Demand deposit and time deposit are selected as independent variables using Multiple Regression in order to see their relationship with Statutory Reserve Requirement for the year of 1981 - 1994. Prior to that, Karl Brunner and Allan Meltzer Prototype is applied to indicate the nature of the variables of demand deposit and time deposit in related with Statutory Reserve Requirement.

This study also includes calculations to measure the probable effect given in the percentage in demand deposit and time deposit to Statutory Reserve Requirement by using Elasticity method. This project paper then will be closed with some conclusions and recommendations in related with the finding obtained through those above method analysis.
