ABSTRACT

This study will address four main purposes which are to identify the relationship of the most influence of entrepreneurship education on the entrepreneurial intention. This study will design to investigate the relationship between entrepreneurship education and entrepreneurial intention. This study will aim to examine the differences on entrepreneurial intention among FSR students in term of gender and level of education. This study will use Theory of Planned Behaviour to measure the Entrepreneurial Intention. It will involve among (N = 184) final year degree and diploma student FSR that still study at UiTM Seremban 3. The primary finding of this study supported that entrepreneurship education will influence entrepreneurial intention. Data will analyse using SPSS version 23. The result of Pearson coefficient correlation as to investigate the relationship between entrepreneurship education and entrepreneurial intention indicate were $r = .769$ (strong positive correlation) and $p\text{-value} < 0.05$ (significant). The researcher summarizes that there was relationship between these variables. Then, the researcher had used Independent t-test to examine the differences on entrepreneurial intention in term of gender and level of education. The finding show that there were no significant between entrepreneurship intention influencing by gender ($t(1,182) = -2.350, p = .020$). Additionally, the result show that there were a significant between entrepreneurship intention influencing by level of education ($t(1,182) = 4.905, p = .000$).

Keywords : entrepreneurship, entrepreneurship education, entrepreneurial intention
