ABSTRACT

The purpose of this study is to investigate the level of knowledge, attitudes and practices of hand hygiene among nursing students at UiTM Puncak Alam. The study design selected for this study is cross-sectional study. The sample data obtained through convenient sampling procedure by using self-administered questionnaires of validated (Cruz & Bashtawi, 2016). Researchers distribute this questionnaire based on the sampling criteria that are to the undergraduate nursing students (Diploma and Degree) including resident and non-resident students. This research was conducted at UiTM Puncak Alam Campus with the 187 participation of the students. The sample size was calculated by using Raosoft Sample Size Calculator. Then, the data collection was done
