AUTHOR’S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Noor Azliza Wani binti Abd. Aziz
Student I.D. No. : 2017633344
Programme : Doctor of Philosophy (Medicine) – MD990
Faculty : Medicine
Thesis Title : Mechanisms of Resveratrol-induced Neuroprotection in Rats with Intracerebral Hemorrhage: Insight on the Role of Adenosine A1 Receptor

Signature of Student : .................................................................
Date : February 2021
ABSTRACT

Stroke is a common cause of brain injury and contributes to significant mortality worldwide. Intracerebral hemorrhage (ICH) remains the least treatable stroke and is characterized by hematoma (HT) expansion and perihematomal (PHT) damage. Tumor necrosis factor-α (TNF-α) activation underlies PHT damage in ICH. TNF-α triggers apoptosis and necroptosis by increasing caspase-3 (CASP3) and receptor-interacting protein kinase 3 (RIPK3) respectively. None of the current therapy protects PHT. The only definite treatment is by evacuation of HT, which often results in incomplete recovery from HT-induced secondary injury. In view of the neuroprotective effects of trans-resveratrol (RV), we investigated the effects of RV on brain injury induced by collagenase (COL) in Sprague-Dawley rats. The objective of this study was to elucidate the neuroprotective effect and mechanisms of action of RV, with an insight on the role of adenosine A1 receptor (A1R), against COL-induced ICH in rats. In this study, rats were separated into 5 groups: (i) control, (ii) sham-operated rats, (iii) ICH rats pretreated with vehicle (0.1% DMSO saline, i.c.v.), (iv) ICH rats pretreated with RV (4 nmol, i.c.v.), and (v) ICH rats pretreated with RV (4 nmol) and the A1R antagonist, DPCPX (8 nmol, i.c.v.). Thirty minutes after pretreatment, ICH was induced by intrastratial injection of COL (0.04 U). Forty-eight hours after ICH, rats were subjected to a variety of neurological and neurobehavioural tests and the brain tissues were processed for gross, histological and biochemical analyses. Sections of brain tissue were examined for HT volume through gross morphometry, while morphological features, midline shift, damaged area and neuronal density through histopathological examination using H&E and neuronal nuclei (NeuN) immunostaining. This study revealed that pretreatment with RV reduced HT volume, damaged area and neuronal depletion. DPCPX abolished effects by RV on damaged area and neuronal depletion. Overall, our data demonstrated that RV resolved HT and preserved PHT, while A1R is involved in the neuroprotective effects by RV in PHT. In the next part of our study, mechanisms of neuroprotection by RV against COL-induced PHT damage in rats was elucidated. Homogenate of PHT brain tissues were examined for expression of TNF-α, CASP3 and RIPK3 activity using ELISA, while A1R, mitogen-activated protein kinase P38 (MAPK P38), heat shock protein (Hsp90), brain-derived neurotrophic factor (BDNF) and tropomyosin-related kinase B (TrkB) expression using RT-qPCR. It was observed that pretreatment with RV restored the expression of TNF-α, CASP3, RIPK3, A1R and Hsp90, and increased transcriptional activity of BDNF/TrkB. DPCPX abolished effects by RV on CASP3, RIPK3, A1R, Hsp90 and BDNF. Overall, our data demonstrated that A1R is involved in the antiapoptotic and antinecroptotic effects by RV in PHT via upregulation of BDNF. The final study was done to evaluate the sensorimotor function of rats using neurological severity score, tail flick, open field, grip strength and rotarod tests. This part of study demonstrated that RV protected against signs of neurological deficit including general locomotor, forelimb activity and motor coordination, and partially preserved behavioural activities. DPCPX abolished the effects of RV. This data demonstrated that A1R is involved in the effects by RV against COL-induced neurological and neurobehavioural deficits in rats. In conclusion, this study demonstrates involvement of A1R in the mechanisms of neuroprotection by RV by inhibiting CASP3-dependent apoptosis and RIPK3-dependent necroptosis in PHT area, probably via the cross talk between A1R and BDNF/TrkB pathway.
ACKNOWLEDGEMENT

All praise is due to Allah S.W.T, may blessings and peace be upon Prophet Muhammad S.A.W.

I would like to take this opportunity to thank the following people for their role and kindness, who have contributed in different ways, to the process of completion of this study and eased my PhD journey.

First and foremost, I would like to express my heartfelt appreciation to my main supervisor Professor Dr. Igor Iezhitsa for his mentorship, guidance and inspiration.

My deep gratitude to my co-supervisors especially Professor Dr. Renu Agarwal for her coaching and clarity, and supervisors Professor Dr. Azian binti Abd Latiff and Professor Dr. Nafeeza binti Mohd Ismail for their invaluable input and advice.

My sincere thanks to the lecturers of Department of Pharmacology Associate Professor Dr. Anna, Dr. Norhafiza, Dr. Alimah, Dr. Norsyafika, Dr. Fahitah and Dr Norashikin, lecturers in Faculty of Medicine Dr Salmah and Dr Mary, staffs of Centre for Neuroscience Research En. Razif and En. Yazri, staffs of Laboratory Animal Care Unit Pn. Tini and En. Ahmad, staffs of Histology Laboratory of Department of Anatomy Dr. Syed, En. Azhar, En. Chairul and Pn. Juriah, and staffs of Institute for Medical Molecular Biotechnology En. Thalhah, En. Yusri, Pn. Salina, Pn. Roslina and Pn. Norita, who provided me with facilities, assistance, and ideas.

My special thanks to the Dean of Faculty of Dentistry Dato’ Professor Dr. Mohamed Ibrahim for his kind approval on my study leave, Institute of Graduate Studies for the assistance throughout my study and Ministry of Higher Education for providing the funding of this research.

Thank you very much to my beloved parents En. Abd. Aziz and Pn. Noriah, my husband Yankee Faizal, my children Nadia Farhana, Ahmad Farhan, Nur Hana Irdina and Irsyad Adwa, my elder sister Anis and the other siblings Azam, Mimi, Aiza, Hafizah and Izzat, and the rest of family members for their patience and support.

Thank you so much to my seniors Azra and Aizuddin, and friends Lidawani, Nurhaslina, Zatil, Normie, Azliana, Natasha, Afiqq, Izuddin, Fattah, Haiqal, Zul and Danial for sharing their knowledge throughout my study.

Thank you, and may Allah bless us all.

## CHAPTER ONE INTRODUCTION

1.1 Background of Study                                  1
1.2 Problem Statement                                    4
1.3 Research Questions                                   5
1.4 Research Objectives                                  5
  1.4.1 General objective                                5
  1.4.2 Specific objectives                              5
1.5 Research Hypotheses                                  6
1.6 Significance of Study                                6
1.7 Scope and Limitations of Study                       7

## CHAPTER TWO LITERATURE REVIEW

2.1 Stroke: Definition, Subtypes, Prevalence and Risk Factors  8
2.2 Intracerebral Hemorrhage                              10
  2.2.1 Classification according to hemorrhage localization and etiology 10
  2.2.2 ICH: incidence, risk factors and fatality           11
2.3 Pathophysiology of ICH                               12
  2.3.1 Primary injury                                     12
  2.3.2 Secondary injury                                  13
