## **ABSTRACT**

This research was about development of car promotion. Currently there are many available website for car promotions, but they only focus on specific brands. However, customers prefer to view more than one (1) type of car according to their needs. Current promotion website did not supply the features to check whether the customers are able to support the car based on their salary, down payment, monthly payment and loan. Therefore, web car promotion system was developed with these three (3) objectives. First objective was to gather and analyze the requirement from the stakeholder. Second objective to design the car promotion system and the last objective to develop car promotion system. Furthermore, web car promotion system was developed with three (3) phases which is Requirements Gathering and Analysis, Design and last phase is Development. This system was completed based on the objectives which are to gather and analyze the requirement from the stakeholder. Second objective is to design the car promotion system. Last objective is to develop car promotion system and the fully function system is the deliverables for the last phases which is development phase. Based on all the requirements and analyze the problem statement, the results shows this system to solve the problem statement. The findings of this project are the system, where the customer can search their car based on their preferences. In future other researcher can add the features of this system by having a registration for the user. With the registration, customer can book the time for test drive. This system was created to help customer to find a suitable car.
