## **ACKNOWLEDGEMENT**

In the name of Allah, the Most Gracious and the Most Merciful Alhamdulillah, all praises to Allah for the strengths and His blessing in completing this Final Year Project (FYP) for our 5<sup>th</sup> Semester in Diploma of Mechanical Engineering. This final project report was prepared for subject Mechanical Engineering Design (MEC332), Universiti Teknologi MARA (UiTM), Branch of Pasir Gudang.

Special appreciation goes to both of our lecturer, Sir Faris Syafiq Bin Khalid and Sir Noor Hafiz Nordin for their lectures, supervision and constant support. Not forget to our supervisor, Madam Nur Aini Sabrin Binti Manssor for her guidance, unstoppable positive comments and judgements. Their invaluable help of constructive comments and suggestions throughout the project works have contributed to the success of this project. We take this opportunity to express our gratitude to the people who have been involved formally or informally in the successful completion of this final year project.

This cooperation and support among of the team members including Mohammad Aiman Haikal Bin Musa, Dzarif Nur Haziq Bin Damahuri, Muhammad Faiezun Bin Md Fadzil, Mohamad Nor Hafiz Khan Bin Mohd Maleh Khan and Muhammad Hamzi Bin Hasri who are successfully contribute all of the efforts on this project. The completion of this report was vital for the success of our mission for this project. We are grateful for their constant support and help. Without our cooperation together this project would not have materialized.

Last but not least, deepest thanks and appreciation to our parents, family and others for their cooperation, encouragement, understanding, constructive suggestion and full of support for the report completion, from the beginning until the end of the project. Hence, thanks to all of our friends and everyone that have been contributed by supporting our work and help during the project progress until it is successfully completed.

Thank you.

## 8.0 Conclusion

The conclusion of the Final Year Project is to create a product that can be used for people.

From this project, we can know how to create a successful product by doing survey, using Morphological chart, Pugh chart, benchmarking product from other company and so on. Other than that, we also can find the stress and maximum load one part can support by using Solidwork Software. Lastly, from the process to make this product, we can learn what we need to do to get customer satisfaction and to produce a product that can help people to prevent gas from leak and make the gas is safe. Lastly, all of the objectives requirements are achieved and our final product works properly.

## 8.1 RECOMMENDATION

After all, every product must have its own weakness and disadvantage that can be improved in the future. After some discussion, we got some recommendation from our supervisor and lecturer for our Gas chassis. Some of the recommendation is to improve the design of the gas chassis to make suitable design so that, customer can place the gas chassis anywhere in the kitchen area.

Other than that, material also can be improved to the material that is more eco-friendly. Eco-friendly product also prevents contributions to air, water and land pollution. In conclusion, this recommendation will make our product become better and people will be more comfortable to use it.
