ACKNOWLEDGEMENT

Assalamualaikum, first at all we are grateful and want to say “Alhamdulillah” with honour to our al-mighty Allah for giving us divine patience, strength in implementing, full commitment to do this task in the near future and give a good health to us to complete this task. In addition, we also want to say thanks to my supervisor, Sr. Muhamad Zaki Shamsudin who guide me in Academic Project II (BSS658). He are never gives up giving me information and have a lot of guidance on how to make this academic project successful.

Besides that, thanks also to all friends this batch because they are given cooperation and helped me along doing this academic project. A million thanks to all of our colleagues and friends that have helped me along the way and sacrifice their time for me to share and share important information throughout the completion of this report. Besides my lecturers and friends, we would also want to thank graciously to all the parties involved directly as Fire and Rescue Department that was given a lot of information about fire evacuation or indirectly in contributing their expertise, support and guidance that had helped me complete this report, achieve all of the objectives, and at the same time, accomplishes more about this topic in the very detail.

CHAPTER 1

INTRODUCTION

1.1 Study background

According to the authority guidelines, regulates the Occupational Safety and Health requirements to ensure all students and staff have a safe environment when there are in schools area. Other than that, the Education Act, and Occupational Safety and Health Act, regulate the requirements for fire safety in schools.

However, students in the school situation can still be expose to the hazards and risks to students, teachers, support staff and private sector workers. Awareness of safety while in the area is still at a low level. In Malaysia is still no formal implementation of the guidelines on fire evacuation aspects while at the school. Lack of knowledge about important of safety to the fire evacuation among students and staff employees is a key factor applies accidents at schools. (Ilyani, 2006).

Normally, the school will hold a fire drill to train students to conduct themselves during a fire. It will made in cooperation with the fire and rescue Malaysia. It is a necessary requirement for every school to have it. Most local authorities have safety laws and regulations of some kind. Typical safety regulations and fire codes are commonly issued and administered by the municipality and interior ministry or civil defence. Most of the regulations deal with the structural safety of buildings. These regulations govern the issue of building license or permit. (Brauer, 1990).
