DEAN PREFACE

Assalamualaikum Warahmatullahi Wabarakatuh

My heartiest congratulations go to the Committees for successfully organized PIMES September 2018. PIMES September 2018 enables lecturers and panels from strong industrial background to reflect and share significant ideas, experiences and research findings in the workplace and in partnerships. It is also hoped to encourage collaboration among the lecturers and enhance the quality and performance of the faculty. The research findings derived from this substantial event shall indicate the commitment of lecturers not only in teaching, but also in striving to unfold new knowledge and processes that will benefit the nation. The efforts of our lecturers need to be further extended to a wider audience so that the nation will benefit from the research findings. It is also hoped that, the proceedings will trigger serious thought and more robust research in the field of education as well as plantation and technology so as to help Malaysia achieve Vision 2020.

As we know, agriculture production has increased tremendously today because of the demand from various sectors in the world. To meet the challenges of increasing food demand, techniques and ways should be created to improve productivity, profitability and sustainability of the agricultural system. Industrial agricultural system has led to irretrievably changes in the landscape diversity, soil quality, environment integrity, and natural resource base. This has resulted major questions and curiosity worldwide in relation to the sustainability of agricultural production system. The most significant damage to natural ecosystems and the environment was caused by habitat conversion and corresponding climate change, loss of biodiversity and ecosystem functions, soil erosion and degradation, and pollution from fertilizers and pesticides. Concepts in plant protection have changed in past decades from exclusion or destruction of pest to pest management. Serious problems with pesticides, rapid development of pest resistance, environmental effects of pesticides, and high costs led to development of new approaches and techniques in pest management based on improved knowledge of pest dynamics and their natural enemies, and the interaction between the pest and the crop.

It remains only for me to thank all those who have helped to make this events such a great and wonderful success. Much appreciation is due to the board editor, and reviewers of all papers submitted as well as to all authors whose ideas and contributions ensured rich and lively discussion during the various sessions.

DEAN,

Assoc Prof Dr Asmah Awal

PLANTATION MANAGEMENT EXHIBITION AND SEMINAR 2018 (PiMES)

Melaka, Malaysia

December 15, 2018

INTRODUCTION

The PiMES committee and UiTM (Melaka), Jasin Campus residents are very pleased to welcome all participants in the Plantation and Management Seminar (PiMES) which is organized by Faculty and Agrotechnology.

PiMES aims to give an exposure to the students about the procedure to make a poster by extracting information from their final year project. This seminar will sharpen their communication skill as well as they can exchange and share their research result, projects, experiences and new ideas related to all aspects of studies in plantation management and agribusiness, plant sciences, soil sciences, plant protection, plant biotechnology and agricultural engineering. We sincerely hope that you will enjoy and return home with plenty of inspiration to improve agro-industry plantation practices and research activities.

**THE IMPACT OF PRICE SHOCK OF PALM OIL AND RUBBER
TOWARD ECONOMY GROWTH OF MALAYSIA**

ABSTRACT

Palm oil currently is the most consumed edible oil the world, with Malaysia and Indonesia being top two producers in the world, however the changes to oil palm as the main commodity in Malaysia had decreased the contribution and total number of estate rubber in Malaysia. The price shocks may affect the health of the Malaysian economy since Malaysia is a net exporter of the two commodities. Therefore, the current research aims to examine whether the prices of these commodities affect the economic growth of Malaysia both in the long run and short run. The data collected within 36 years (1980-2016) for price of oil palm, price of rubber and annual economy growth of Malaysia from Malaysia Palm Oil Board (MPOB). The data been analyzed by E-Views through unit root and co-integration test. The result of the research reveals that both variable only has short run relationship toward economy growth and from co- integration test show price of palm oil has positive relationship and statistically significant and affected the economy growth. meanwhile from Granger Causality Test show that price of rubber affected the Malaysian 's economy growth and the result is significant. The conclusion can be drawn that price shock on palm oil and rubber price will affected the economy growth of Malaysia.

Keywords: Price of Palm Oil, Price of Rubber short and long run relationship, economy growth
