3.04 Benefit Analysis of Urban Renewal	70

## 1.00 INTRODUCTION

The purpose of this disertation is to study the develop-  
ment of the urban economic as a new field of economic  
which has paralelled increased interest in domestic  
urban problems. The development of this urban economics  
affected the land use pattern and the property market  
operation and the government legislation in term of  
planning policy as in general and other policies which  
is related and the view of the public, private and  
other agencies towards the urban design development.

The study of this aspect would cover the area of Kuala  
Lumpur city core which act as a basis of this study  
and the development of urbanization at present is  
beyond control and a lot of negative issues created  
in the urban design proper.

## 2.00 AIM AND OBJECTIVES

- a) to identify the prominent economic forces which up-  
hold and generate the urban economic activity
- b) to identify the various urban economic forces which  
change the land use pattern and its market
- c) to identify the various government policies and  
legislative control which affect the land use and  
its economics developments
- d) to classify and compare the development of urban  
economic of this country to that of other urban  
economic theory and approach and possibilities of  
shaping it to suit our national need, particularly  
the National Economic Policy.

### 3.00 JUSTIFICATION OF THE STUDY

As an architectural student and future designer, it is very necessary for us to understand the subjects because it has a very strong relationship in the context of URBAN DESIGN development of this country.

As we can see that the rapid development of Kuala Lumpur especially the city core which has no definite and significant urban economic system of development. The non-parallel activities such as the economic development, planning strategic, government legislations and policies and the public policy and response have created a negative development and haphazard system of urbanization of the city core. It also affect the land use pattern of the urban area.

### 4.00 HYPOTHESIS

- a) the public participation through proper channel would help the government in drafting any policy or legislation pertaining to land use and urban economic control
- b) identification of urban activities and elements of urban development through planning studies and urban economic will help the government to formulate the planning policies, land use control and urban economic development as a whole
- c) introduction and implementing the 'Urban Planning Policies' will help to pattern out the true picture of the urban design
