SUPERVISOR:

MISS NORLEE HUSNAFEZA AHMAD

ACKNOWLEDGEMENTS

First and foremost, I offer my sincerest gratitude to my supervisor Miss Norlee Husnafa Ahmad. She had been a wonderful supervisor and made a great contribution to our Final Year Project. The support and encouragements that she had given to us is greatly appreciated. The time that has been put to make this project a success is enjoyable with her acting as our supervisor.

Lastly, I offer my regards and blessings to my colleagues and all of those who supported me in any respect during the completion of the project.

ABSTRACT

Druid – The Instant Mechanic is designed to ease the problems of vehicle breakdown. This may be a great idea to be worked for the future. Here we have designed a quite simple charger to help charge lead-acid battery of a vehicle. The aim is to educate the society on how to face everyday vehicle problems easily.

For the result we have obtained a significant value that may charge a lower value of current of lead-acid battery. This is due to a lag of input supply that we are not able to obtain. Even though, the output result may slightly less than its input value the process of charging still successfully worked. But it takes a longer time.

It is observed that the charger circuit works as it supposed to be.

TABLE OF CONTENTS

ACKNOWLEDGEMENT	iii
ABSTRACT	iv
LIST OF FIGURES	v
LIST OF TABLES	vi
CHAPTER 1 INTRODUCTION	1
1.1 Background of Study	
1.2 Problem Statement	3
1.3 Objective of Research	3
1.4 Scope of Study	3
CHAPTER 2 LITERATURE REVIEW	4
2.1 Introduction	4
2.2 Lead Acid Battery	4
2.3 How Lead Acid Battery Works	5
2.4 Lead Acid Battery Charger	6
2.5 Improvisation	7
CHAPTER 3 MATERIALS AND METHODS	8
3.1 Materials	8
3.2 Table of Materials	11
3.3 Methodology	12
CHAPTER 4 CIRCUIT DESIGN AND OPERATIONS	13
4.1 Schematic Diagram	13
4.2 Circuit Operations	16
