ACKNOWLEDGEMENT

Firstly, I would like to place my highest gratitude to Sr.Mohd Nurfaizal Bin Baharuddin as he is the person in-charge whom monitoring me during practical training ,who helped a lot in motivating and guiding me on the way completing this final report of deep foundation accordingly to the practical training syllabus. With some of the useful critiques, those help me to improve the quality of this final report. After that, I would like to thanks my parents, as they always give their support financially, physically and moral values. Besides, this appreciation also goes to my supervisor at work place , Haji Mohd Redzuwan Bin Ahmad Jusoh, Assistant Engineer, Building Department, Public Works Department(PWD/JKR), who the one in-charge in monitoring me every day during office hours. Special thanks to Hj.Abd.Razak bin Said, the leader of Building Department, Public Works Department (PWD/JKR), knowledgeable man in this field whom never forget to give me chances having great experiences also in advancing building knowledge under his supervision. Lastly, thanks to friends and people surrounds me who give full cooperations when needed until final report completed on time.

ABSTRACT

Foundation is a base in constructing a building. Each building need to go through certain tests and type of foundation weather to use shallow or deep foundation is based on the design of the building. Before begin the work on constructing a foundation, site investigation need to be done by certified surveyor appointed by the local authority and soil investigation need to be carried out to know the strength of the soil for long time of period. After that, excavation will be proceed follow the procedures and related regulations to ensure the safety of workers, publics and structures nearby the construction site. In conjunction as follow, then the construction shall begin with correct people in charge and full requirement followed.
