SUPERVISOR: EN. HASRUL HAFIZ BIN ABU BAKAR

A project report submitted in partial fulfillment of the requirements for the award of the degree of Diploma in Electrical Engineering (Electronics/ Telecommunication/ Instrumentation/ Computer)

Faculty of Electrical Engineering
University Technology MARA

APRIL 2013

“ I declare that this report entitled “Smart Toilet” is the result of my own group research except as cited in the references. The report has not been accepted for any degree and it not concurrently submitted in candidature of any other degree.”

ACKNOWLEDGEMENT

Alhamdulillah, thanks to Allah for giving us the strength physically and mentally to strive and faced every problem that occur during the time we are tried to complete this final year project.

A very special thanks to our supervisor, Encik Hasrul Hafiz Bin Abu Bakar that guide us a lot in order to make this project able to be done smoothly. Thanks for taught us what to do and always gives his best and commitment.

Last but not least, we would like to give a special thanks to our parents that support us with motivation as well as money to buy component. We would like to thank our group member that had given such a full commitments and responsibility throughout this final year project.

ABSTRACT

This project was created to focus on using toilet wisely. This project consists of 4 major parts of circuit such as power supply, transmitter and receiver for infrared sensor, and water level sensor. The function of water level sensor was the most important in this project as it is used to control the cleanliness of the toilet. The water level sensor was connected to power supply circuit. The power supply circuit will convert from 12V AC to 9V DC. The water level sensor will control the amount of water that fill in the water tank. User of the toilet can out from the toilet if only the water tank was flushed. This water level sensor will produced solenoid retraction as an output to allow user open the toilets' door. The infrared sensor was detected humans' motion. This infrared sensor will produced lamp as output.

This smart toilet was very suitable to keep the cleanliness of the toilet. People nowadays just lack of responsibility. That is way this smart toilet is very important.

TABLE OF CONTENTS

	PAGE
ACKNOWLEDGEMENT	i
TABLE OF CONTENTS	ii
LIST OF FIGURES	iii
ABSTRACT	v
ABSTRAK	vi
CHAPTER 1 1.0 INTRODUCTION	
1.1 Smart Toilet	1
1.2 Problem Statement	2
1.3 Objective	2
1.3 Scope of project	3
CHAPTER 2 2.0 LITERATURE REVIEW	
2.1 Ability	4
2.2 Circuits Description And Operation	4
2.3 Relay	5
2.4 Voltage Regulator (IC 7812)	6
2.5 Heat Sink	7
2.6 Resistor	8
2.7 Capacitor	9
2.8 Light Emitting Diode (LED)	10
2.9 Diode	11
CHAPTER 3 3.0 METHODOLOGY	
3.1 Flow Chart of The Project	12
3.2 Circuit Implementation	
3.2.1 Power Supply	13
3.2.2 Water Level	14
3.2.3 Motion Sensor	17
CHAPTER 4 4.0 RESULT AND DISCUSSION	
4.1 Result	18
4.2 Discussion	20
CHAPTER 5 5.0 ACTIVITIES	
5.1 Process Of PCB	21
CHAPTER 6 6.0 CONCLUSION & FUTURE RECOMMENDATIONS	
6.1 Future Recommendations	26
6.2 Conclusions	27
APPENDIX	28
