BACHELOR OF SCIENCE (HONS.) IN DATA COMMUNICATION AND  
NETWORKING

A PROJECT PAPER SUBMITTED TO  
FACULTY OF INFORMATION TECHNOLOGY AND QUANTITATIVE  
SCIENCE

UNIVERSITI TEKNOLOGI MARA

NOVEMBER 2008

## ACKNOWLEDGEMENT

In the name of Allah, who is the Gracious, Most Merciful and Him alone are worthy of all praise; Alhamdulillah, with His bless, I am able to complete this project with my full effort and within the time constrain given to me.

First and foremost, I would like to address my deepest appreciation and sincerest thanks to my dedicated supervisor, Puan Siti Rahayu Binti Abdul Aziz, for her invaluable guidance, encouragement and constructive criticism that I had been receiving for the preparation of this manuscript and the well going for this study. I also wish to express my sincere appreciation to my lecturer for Research Project Course (ITT580), En Adzhar Bin Abdul Kadir for his guidance, encouragement, comments, ideas, tolerance and support that led to a better quality of my thesis project. And also to all lecturers in the Faculty of Information Technology and Quantitative Sciences, thanks for their dedication, efforts and support in sharing valuable knowledge. I do feel most fortunate to have her expert guidance, precious advice and suggestions at every step of my project. I am so grateful to have this opportunity to learn and gain experience doing this project from such a skilled and talented lecturer.

Last but not least, to my family, who always motivate me and support me throughout this project, and also to all my friends who helped me along the way, due to complete this project. I wish them best of luck and thank you for everything. To all mentioned here, may Allah bless you all.

## ABSTRACT

A mobile ad-hoc network (MANET) is a kind of wireless ad-hoc network, and is a self-configuring network of mobile routers connected by wireless. MANET may operate in a standalone fashion, or may be connected to the larger Internet. Many routing protocols developed for MANETs over the past few years. This project was evaluate three of MANET routing protocols which are Ad-hoc On-demand Distance Vector (AODV), Dynamic Source Routing (DSR) and Dynamic MANET On-demand routing protocol (DYMO) to make better understand the major characteristics of the three routing protocols. Different performance aspects were investigated in this project including, packet delivery ratio, routing overhead, throughput and average end to end delay. This project was use Linux as a operating system based platform and using a discrete event simulator NS2 as a simulation software to compare three MANET routing protocol. The NS2 is written in C++ and an Object oriented version of Tcl called OTCL. This project simulation results indicated that all routing protocols perform well according to performance metrics that be selected. For packet delivery ratio metric, performance of AODV, DSR and DYMO routing protocols quite similar between each others. DSR perform low and stable normalized routing overhead than AODV and DYMO for normalized routing overhead metric. Besides that, DYMO routing protocol perform well than AODV and DSR routing protocol in term of throughput. Finally, for average end to end delay, DYMO and AODV perform well than DSR.

ACKNOWLEDGEMENT	iii
ABSTRACT	iv
TABLE OF CONTENTS	v
LIST OF TABLES	ix
LIST OF FIGURES	ix
LIST OF ABBREVIATION	xiv
<b>CHAPTER 1: INTRODUCTION</b>	
1.1 Background Of The Problem	1
1.2 Problem Statement	2
1.3 Objective Of The Project	2
1.4 Scope And Limitations	3
1.5 Significant Of Project	3
1.6 Organization Of Report	4
<b>CHAPTER 2: LITERATURE REVIEW</b>	
2.1 Introduction	5
2.2 Definitions Of Pertinent Technology Terminologies	6
2.2.1 Mobile Ad Hoc Network (MANET)	6
2.2.2 Routing	7
2.2.3 Protocol	7
2.2.4 MANET Routing Group	7
2.2.5 Operating System	7

2.2.6	Computer Network	8
2.2.7	Simulation	8
2.3	Network Simulation NS2 Overview	9
2.3.1	History of Network Simulation	9
2.3.2	What is Network Simulation NS2	9
2.4	Performance Evaluation of AODV, DSR and DYMO Routing Protocol Using NS2 overview	10
2.4.1	What is Ad Hoc On Demand Distance Vector Routing Protocol (AODV)	10
2.4.2	What is Dynamic Source Routing Protocol (DSR)	11
2.4.3	What is Dynamic On-Demand MANET Routing Protocol (DYMO)	12
2.4.4	What Kind of Performance That Researcher Evaluates	13
2.4.4[a]	Packet Delivery Ratio	13
2.4.4[b]	Normalized Routing Overhead	13
2.4.4[c]	Throughput	14
2.4.4[d]	Average End to End Delay	14
2.5	Brief Description of All Known Similar and Relevant Ongoing Project	15
2.5.1	Performance Analysis of MANET Routing Protocols In The Presence of Self-Similar Traffic	15
2.5.2	Performance Analysis and Comparison of Ad Hoc Routing Protocol	16
2.5.3	Performance Analysis of Ad Hoc Network Routing Protocol	17
2.5.4	Performance Comparison of MANET Routing Protocols In Different Network Sizes	19
2.6	Conclusion	20
