Bachelor of Science (Hons.) Netcentric Computing
Faculty of Computer and Mathematical Sciences

NOVEMBER 2010

ACKNOWLEDGEMENT

In The Name of ALLAH, Most Gracious, Most Merciful and big Gratitude to Prophet, Muhammad SAW...

First of all, I would like to thank Allah S.W.T because without His permission I would not have the chance to complete my final year project in order to complete my course, Bachelor (Hons) in Netcentric Computing. Besides that, I would like to thank to the people that had given me a lot of cooperation and contribution during the completion of this project. I also indebted to my supervisor, Puan Zolidah Kasiran who has given me a lot of outlines and guidelines in order to make sure I do well in my final year project. Finally, I would like to take this opportunity to record my appreciation for the encouragement given by my family and friends, with their understanding towards my situation in order to complete this course.

ABSTRACT

The lecturer's promotion assessment process done by FSKM currently had involved complicated manual processes. Some of the problem that had been facing before was involved in poor data storage because there was no efficient exercise to centralize all the information related to the promotion assessment. As a consequence, the promotion assessment will result in inefficient process. The aim of this project is to develop a new systematic exercise for assessing the UiTM lecturer's promotion assessment from grade DM 45 to grade DM 52. In this project, web-based system approach is proposed to improve the current process which had been used stand-alone machines. It will also implements PHP language, Mysql database and Windows platform as a combination to achieve the systematic promotion exercise. This new systematic exercise can ease the management process and centralized the whole records which are related to the promotion assessment's information.
