## **ACKNOWLEDGMENTS**

First of all, I would like to thank Allah Azza Wa Jalla for giving me everything in my life, whether by direct or indirect help, in helping me continuing my life in this university, and finally make this final project a reality. I also would like to thank my family for their continuous support. The successful completion of this thesis is a proof.

A special thanks goes to my advisor Puan Nursuriati Jamil, who I had a guidance throughout this project. Thank for your undying patience in guiding me and leading me until the end of this semester. Without you, maybe this thesis will not become a reality. Thank you very much.

I would like to thank the staff and doctors of Hospital Besar Alor Setar who contribute their valuable input, whether directly or not, during my research in the hospital. 'Good life' to all of you.

Last but not least, I would like to thank to everybody in my life who contribute his or her wealth of valuable input, whether directly or not, during my study in this university. 'Salam' to all of you. Thank you very much

## **PATIENT AND MEDICAL REPORT SYSTEM**

### **ABSTRACT**

Hospital Besar Alor Setar Patient and Medical Record System is a system that is specifically designed for the patient medical record process purposes at Hospital Besar Alor Setar. Here, patient can register to the hospital, make appointment with a doctor and get medical report for insurance claims. With problems such as difficulty in locating patients medical report(on paper), the existence of this system is hoped to be more practical than the manual procedure. The main objective of this system is to provide an alternative other than the manual based system. Besides that , it also provides better information access for both the patients as well as the administrators and doctor's of Hospital Besar Alor Setar. For the patients, besides easier and faster medical report production, they can also make an appointment easily. As for the administration of the hospital, it will make it easy for them to keep track of the patient/medical records and the doctors' timetable. Besides that the doctor can review his/her timetable and patients medical record before their appointment.
