July 2016

ABSTRACT

Telecommunication industry has growing fast recently. Telecommunication network become important for communication not only for business but also for the many life-style and some critical communication services such as government defense, banking sectors and transportation control. Ensuring the communication network to stay up all the time is not an easy task to the network designers. In telecommunication industry, employee attrition is very high and unmanageable where demand of network designer is very high from others organizations and competitors. Every year, organization experiencing staff retirement, transferred and resignation which they take away the valuable network design knowledge with them. Network design knowledge is an abstract and scattered around the organization and individual designers due to network design is a project based task and the requirement from customer with another customer is different makes the knowledge captured are often kept in silos. This research has discovers three types of knowledge which is Telecommunication Network Resilient Definitions, Resilient Network Design Knowledge and Resilient Network Design Process Knowledge. In the end of findings, author proposed a process model in designing resilient telecommunication network and a guideline for future reference. The knowledge captured through expert's interview, documents analysis and observation where author directly involved in designing resilient telecommunication network. Therefore, in the taxonomy development, the concept and relationship are derived from customer requirements and the technologies used to fulfill the customer needs. Taxonomy approach was utilized to classify the telecommunication technologies and group for easy understanding. The significance of the research is about exploring the telecommunication network design processes and modelled the processes into structured ways for future reference. Organization can use this resilient telecommunication network design process model as guidance to inexperience and young designers to design the network and propose the best solution to the customers. The findings discovered in the network design activities, intensified knowledge happened in the interpreting customer requirements phase. During this phase, lots of tacit and explicit knowledge created and embedded in the solutions to the customer requirements.

ACKNOWLEDGEMENT

Praise be to Allah SWT Most Gracious, Most Beneficent

First and foremost, praise to Allah for giving me courage, strength, good health and determination to complete this thesis. Without His blessing and permission, this thesis could not have been completed.

I would like to express my deepest appreciation to all those who provided me the possibility to complete this report. A special gratitude I give to my supervisor Associate Prof Dr. Haryani bt Haron, whose contribution in stimulating suggestions and encouragement, helped me to coordinate my project and ideas given in order to completed this report.

Nevertheless, I would like to express my special gratitude and thanks to my parents
, my lovely wife '.

and my "heroes" for
their love and support.

Last but not least, many thanks go all my colleagues and close friends whose have willingly helped me out with their abilities.

Thank you, may ALLAH bless all of you.

TABLE OF CONTENTS

AUTHOR'S DECLARATION	i
ABSTRACT	ii
ACKNOWLEDGEMENT	iii
TABLE OF CONTENTS	iv
LIST OF TABLES	vii
LIST OF FIGURES	viii
CHAPTER ONE: LITERATURE REVIEW	1
1.1 Research Background	1
1.2 Problem Statement	2
1.3 Research Question	2
1.4 Research Objective	3
1.5 Research Scope	3
1.6 Significant of Research	3
1.7 Organization of Research	4
CHAPTER TWO: LITERATURE REVIEW	6
2.1 Introduction	6
2.2 Telecommunication Network	6
2.3 Telecommunication Network Evolutions	8
2.4 Telecommunication Industry	9
2.5 Fixed / Wired Network	10
2.6 Mobile / Celular Network	11
2.7 Previous Study On Resilient Telecommunication Network	13
2.8 Knowledge Management and Taxonomy Approach	15
2.9 Resilient Issues In Telecommunication Network	17
2.9.1 Cyber Fraud	17
2.9.2 Disaster Threat	19

2.9.3 Terrorism Threat	20
2.9.4 Vandalism and Cable Theft	21
2.10 Summary	22
CHAPTER THREE: RESEARCH METHODOLOGY	23
3.1 Introduction	23
3.2 Research Approach	23
3.2.1 Qualitative Study	23
3.2.2 Case Study	24
3.3 Data Collection	24
3.4 Research Design	25
3.5 Summary	30
CHAPTER FOUR: NETWORK DESIGN KNOWLEDGE	31
4.1 Introduction	31
4.2 Data Collection	31
4.2.1 Respondents	31
4.2.2 Document Analysis	33
4.2.3 Observations	34
4.3 Knowledge Network Design	34
4.3.1 Knowledge of Resilient Telecommunication Network Definition	35
4.3.2 Knowledge of Resilient Telecommunication Network Design Approach	37
4.3.3 Knowledge of Resilient Telecommunication Network Design Phases	39
4.4 Resilient Telecommunication Network Design Processes	40
4.4.1 Phase 1 - Analysis Requirement	41
4.4.1.1 Identifying Network Objectives	41
4.4.1.2 Identifying Network Technical	42
4.4.2 Phase 2 - Develop Conceptual Design	42
4.4.2.1 Design Topology	43
4.4.2.2 Technology and Network Equipment Selection	44
4.4.2.3 Capacity and Bandwidth Planning	46
