ACKNOWLEDGEMENT

I wish to thank my supervisor, Puan Anitawati Mohd Lokman for her invaluable guidance and assistance in making this research possible. I am greatly indebted to her for helping me to overcome obstacles in the process of conducting the research. I would also like to thank all my colleagues who took time providing and helping me with appropriate information and effort despite their busy schedules. Finally, I wish to express my sincere gratitude to family especially to my wife for their support, patience and encouragement in helping me to complete this research.

ABSTRACT

This study proposes an e-mail framework that is going to be acting as a virtual community tools framework for the members of Small and Medium Industries (SMIs) to work together in selling their products and services to the end users. Indeed, e-mail is an aggregator to aggregate the entire products of SMIs in one place. In this study, the concept of the e-mail system is explained and the method that is used to develop its framework is described. Definitely, to come up with the framework, theoretical foundations and findings from the past literatures, journals and researches are explored, reviewed and compiled. At the end, the framework is drafted and described as a guideline to develop the exact e-mail system.
