ACKNOWLEDGEMENT

Alhamdulillah, we are thankful to Allah s.w.t. for giving us bless, patience and courage to face so much challenges in completing our report.

In preparing this paper, there are a lot of people that continuously help us and contribute their thoughts, ideas or even energy.

We wish to express our sincere appreciation and special thanks to our supervisor of this project, Dr. Marina Binti Ismail for the inspiration, ideas and guidance that she has given to us. Without her supervision, we will not be able to complete this paper and not even have confident in delivering our ideas through this paper. The continuous support from her, really help us in the progression and smoothness of this project paper. The cooperation is indeed appreciated.

We would also like to thank En. Mohd Yunus bin Mohd Yussof and Puan Suzana binti Baharudin for giving us brief explanation on final year project, ideas on our project title and also inspiration to present a good project.

Finally, we would like to thank our lecturers, family, classmates and also our friends in giving a lot of support, inspiration and advices to us to complete this paper successfully.

ABSTRACT

A lot of researches have been done on different approaches in delivering a story which are by using storytelling, storybooks or reading materials, TV program or video and other approach. However, there are a lot of issues are found by using these approaches. These approaches have their own drawbacks and weaknesses in delivering stories. Therefore, this paper proposes the use of game approach in delivering a story. Game is being chosen as an approach for this project as it is the fundamental to Generation Y which mostly consists of the youngsters nowadays. This generation is known to live with technologies as they are the media-focused generation. This project will be targeted to homogeneous group of 10 years old children which has same characteristic, same cognitive level or way of thinking and same background. Generally, the purpose of this project is to identify the most suitable game approach between three different types of game which are puzzle, adventure and platform game in delivering a story for children. The method that will be applied in the development phase of this project is Digital Game Based Learning (DGBL) model. Hopefully, this paper will help the reader and the user to understand and get influenced on the importance of game as the approach in delivering a story.
