ACKNOWLEDMENT

Alhamdulillah, thanks to Allah SAW that this project was finally complete. I would like to express my gratitude to the following person whose support me in ensuring the successful completion of this project within the time duration given.

*

First and foremost, I am grateful to my supportive and helpful supervisor Puan Marina bt Ismail and Encik Mohd Yunus Bin Mohd Yusoff whom had helped me so much and had gave me their valuable suggestions and guidance for the project. I am truly grateful for their continual support and cooperation in assisting me all the way through the semester. I also would like to express my special thanks to teachers of SRAR Ngah Ibrahim Al-Barakah, which give me permission for testing and evaluation of the application.

Secondly, a bunch of appreciations to my beloved parents
and all my dearest siblings whom have helped me in getting through the misery period while completing the project. I would like to thank them for their understanding, undivided support and also for the funding of the project. I would never have gone this far without their support.

Last but not least, tokens of thanks and appreciations to all my lectures and my friends, for their guidance and advices whom have shared their knowledge and helping me in completing the project. Their emotional support during my study is useful and I am proud of it. Without their support and kindness, this project may have some difficulties to finish up.

ABSTRACT

Arabic language is the language of Holy Quran. Arabic Language has an exceptional position in Islam. It is the language of Quran, thus the need to learn and understand Arabic amongst Muslims is of paramount importance. With the advent of computer technology, various kind of multimedia tools have been developed for the purpose of language learning. Since children are attracted to computer applications especially those that involve multimedia, there is a need to develop Arabic language learning applications for them. Even though there are few applications available in the market for that purpose, most of them do not fully utilize the multimedia elements. Therefore, an interactive field-tested Arabic verb learning with active learning approach has been developed as an alternative to the traditional learning tools.
