Independent Study Report is submitted in partial fulfilment of
the requirements for the degree of

Master of Science in Information Technology

Faculty of Information Technology and Quantitative Science

April 2005

ACKNOWLEDGMENT

This study has been carried out at Universiti Teknologi Mara (UiTM), School of Information Technology and Quantitative Science. The research report was developed under the supervision of Mr. Fauzi Mohd Saman in the faculty of Information Technology and Quantitative Science.

It is a pleasure for me to thank Mr. Fauzi Mohd Saman for his great involvement, devoted guidance and invaluable help throughout all stages of the study. His passion to knowledge and rich experience was a great source of inspiration to me.

I would also like to express my thanks to Associate Professor Dr. Nor Laila Md. Nor, the Programme Coordinator of Master of Science in Information Technology (MSc.IT), who is directly guided and advised through the Professional Awareness and Research Skills (PARS) class to complete this study report writing.

Not forgetting to express my thanks to all lecturers, friends from the Master of Science in Information Technology programme and also to survey participants, particularly yahoo group community and MSc.IT Groups community who have given thoughts and ideas, cooperation, continuous support and help throughout the studies. Also to my dearest wife, daughters and sons, mother, brother and sisters, thank you for the love, prayers and scarifying also understanding.

I hope this study will be a beneficial step for the local government in Malaysia in upgrading their information system not only on the road map system but to any other value added information that beneficial to their resident. The introduction of the system implementation in Shah Alam will be the benchmark on the successfulness of Interactive Road Map System Kiosk in Malaysia.

ABSTRACT

Most of the Malaysian mainly motorist, faces a difficulties to find a location with a road system in Malaysia. The same problem faced is not only in Malaysia, people the entire world still not comfortable with a conventional map system and always ended with frustrating in using it.

Current road map system in Malaysia is still using a conventional type by displaying on the information board or using hard copy. There is other alternative system beside a traditional-paper map called Interactive Road Map. Interactive maps provide new opportunities for distributing information within an organization or to the public via the Internet. Map board available that usually provided by the local government is always not located at strategic area. The map is always looking 'dead' without any maintenance or regular update is being done by the responsible party. A commercial map is also available but in a conventional buying process form and it sell not is a lower cost.

It is about time to introduce a new system by manipulating the IT technology. A system that has a function such as a street finder that already available in the market will be the best solution. Beside the street finder, the operating software includes an integrated mapping system that allows the user to find specific street addresses, landmarks, cities and tourist attractions. The GIS-based map display is fully interactive and allows the user to zoom in, zoom out or pan around the map to achieve information they wish to print.

This study is to measure a readiness of Malaysian using IT in road map system, which is located at hotspots area such as petrol station, 24 hours convenience store and shopping complex. Readiness in the macro context will be referring to the IT knowledge and cost that apply in using the system.

TABLE OF CONTENTS

TITLE PAGE	i
ACKNOWLEDGMENT	ii
ABSTRACT	iii
TABLE OF CONTENTS	iv
LIST OF FIGURES	vii
LIST OF TABLES	ix
LIST OF ABBREVIATIONS	ix
CHAPTER 1 INTRODUCTION	1
1.1 Background of the study	1
1.2 Problem Statement	1
1.3 Objective and scope	2
1.4 Implications and Limitations	3
1.5 Project Significant	4
1.6 Summary of Independent Study Structure	5
CHAPTER 2 LITERATURE REVIEW	6
2.1 A definition	6
2.1.1 Interactive	6
2.1.2 Road	7
2.1.3 Map	8
2.1.4 Kiosk	9
2.2 Overview of Past Interactive Kiosk Systems	11
2.3 Kiosks and their applications	13
2.4 Interactive Road Map System Kiosk - System Overview	13
CHAPTER 3 METHODOLOGY	16
3.1 Methodology Used	16
3.2 Data Sources	16
3.3 Research Method	17
3.4 Data Collection	17
3.5 Sample Frame and Size	17

3.6	Sample Design	18
3.7	Research Matrix and Questionnaire	18
3.8	Four Sections of Questionnaire	19
3.9	Interview	19
CHAPTER 4 RESEARCH FINDINGS AND ANALYSIS		20
4.1	Respondents Profiles	20
4.1.1	Background of Respondents	20
4.1.2	Gender	22
4.1.3	Age Distribution	22
4.1.4	Marital Status	24
4.1.5	Level of Education	25
4.1.6	Resident of Shah Alam	26
4.1.7	Annual family or single household income	27
4.2	Respondent understanding on IT and Kiosk System	29
4.2.1	Computer User Experience	29
4.2.2	Computer User Experience Period	30
4.2.3	Kiosk System Knowledge	31
4.2.4	Kiosk System User Experience	33
4.3	Respondent understanding Road Map System	34
4.3.1	Familiarity with the Shah Alam area	34
4.3.2	Experience using a road map in finding	35
4.3.3	Frequency using a road map in life	37
4.3.4	Frequency of lost without map in life	38
4.3.5	Experience of lost without map in Shah Alam	39
4.3.6	Direction assistant during lost	41
4.3.7	Road map as a tool	42
4.3.8	Road map accessibility	43
4.3.9	Difficulties of getting a road map when lost	45
4.3.10	Opinion on the current road map system especially in Shah Alam	46
4.4	Respondent readiness on Interactive Road Map System Kiosk	50
4.4.1	IT element in the road map system	51
4.4.2	Knowledge on Interactive Road Map System Kiosk	53
